

Cutting & Grinding SAWING PRODUCTS

Where Innovation Meets the Metalworking Industry

DoALL Sawing Products has been manufacturing cutting and grinding fluids since the 1950s. We offer a broad range of products including:

- · Cutting oils like synthetics, semi-synthetics, soluble oils and straight oils
- Grinding fluids
- Direct application machine tool lubricants
- Metalworking and machining coolants and lubricants
- Hydraulic, transmission, gear, way and spindle oils
- Cleaners and removers
- Tank additives
- Aerosol, mist and Minimal Quantity Lubrication (MQL) lubricants
- Specialty products

Our products are a cut above the rest!

DoALL Sawing Products has a knowledgeable sales team and distributor network that market metalworking cutting products worldwide. DoALL is committed to providing customers with high quality, cost-effective performance fluids to improve operations and reduce costs. At DoALL, we are dedicated to offering environmentally friendly and worker safe solutions to meet all your machining needs.

Solutions for ALL Your Sawing Needs

DoALL Product Overview

Synthetic Fluids

DoALL synthetic fluids are used for cutting and/ or grinding applications. Our synthetic fluids are designed to provide superior performance for critical machining and grinding applications of ferrous metals. Our fluids offer excellent surface finish, tool life and corrosion protection.

Semi-Synthetic Fluids

Semi-synthetics optimize the benefits of synthetics and soluble oils in one fluid. DoALL semi-synthetics are formulated with the newest technology for long sump life and the best tramp oil rejection. They easily maintain a sharp line on the refractometer for close concentration control and the best balance between control of both bacteria and mold.

Soluble Oils

DoALL water soluble fluids form a stable oil and water emulsion to protect cutting equipment. Soluble oils have low operator sensitivity and offer good corrosion protection, tool life and surface finish. Extreme pressure fortified water soluble oils like the 300 Series have the ability to handle alloy steels.

Straight Oils

DoALL straight oil offers the highest lubricity for cutting and grinding operations. These straight oils are 90% oil and do not emulsify in water. These are used when lubricity is the greatest requirement and the speed of the machine is slow enough that cooling action is not needed. These products are formulated for increased tool life and better surface finish.

Aerosols

DoALL aerosols are high-efficiency metalworking lubricants compatible for use with air driven application systems or minimum quantity lubrication equipment. Our aerosols offer precision stream or broad spray action to penetrate and displace moisture to aid lubrication.

Machining Fluids

DoALL direct application and AL-series of metalworking fluids are designed for use in applications where flood coolants are prohibited or not required. Used with an air-driven application system producing "dry" chips as the fluid is used up in the cutting operation. These fluids are suitable for use in air driven spray mist systems or MQL (Maximum Quantity Lubricant) equipment.

Metalworking Fluids

DoALL high-efficiency metalworking lubricants form a high strength molecular coating on the cutting edge of the tool reducing friction and extending tool life. They contain no petroleum, sulfur, or chlorine and are non-toxic, nonflammable and non-polluting.

Cleaning Fluids

DoALL cleaning fluids are used to remove soils and contaminants from metal substrates normally found in the steel and metalworking industries. Our products clean ferrous AND nonferrous surfaces and are compatible for use with other metalworking fluids.

Specialty Fluids & Products

DoALL offers other specialty fluids and products that are compatible for use with other DoALL cutting fluids. For example, one of the most popular parts we offer is a lubricant wax stick called Tool-Saver which provides the opportunity to apply immediate lubrication when cutting.

Synthetic Fluids

BAND-ALL® 103

Clear green, synthetic cutting and grinding fluid with a fresh scent. Performs well in most machining applications. Ideal for tough operations such as sawing, tapping and deep hole drilling. This product is suitable for use on ferrous and non-ferrous metals.

- Formulated with a premium extreme pressure additive package
- Exhibits good detergency, rejects tramp oil
- Long sump life and easily maintained

KLEEN-KOOL®

DoALL premium synthetic with an extreme pressure additive package for moderate to heavy-duty machining operations.

- Offers long sump life
- Ideal for moderate to heavy-duty machining, sawing, tapping, deep hole drilling
- Suitable for ferrous and non-ferrous metals

KLEEN-KOOL ES

Economical cutting and grinding fluid specially formulated for light to medium-duty machining.

- Cost-effective product without the use of expensive additives
- Ideal for light to moderate machining and grinding operations
- Suitable for use with ferrous and non-ferrous metals

KLEEN-KOOL GP

A cost-effective, general purpose cutting and grinding fluid for light to medium machining.

- Ideal for use in surface, cylindrical and centerless grinding applications
- Product is dyed blue

KLEEN-KOOL ULTRA 🥑

A premium, doubly-concentrated cutting and grinding metalworking fluid for medium to heavy-duty machining operations. This product is also available in totes increasing space efficiency in your plant.

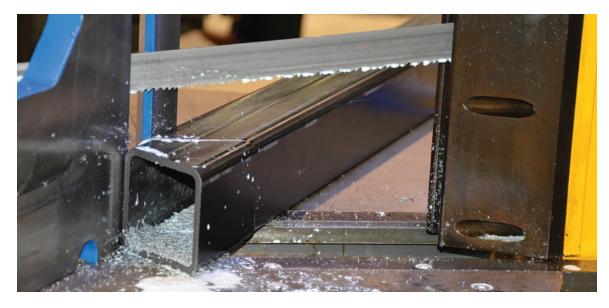

- Offers long sump life
- Specially formulated with a premium extreme pressure additive package
- Contains more additives for ultimate control of rancidity and corrosion
- Low foaming
- Suitable for use on ferrous and non-ferrous metals

Semi-Synthetic Fluids

BAND-ALL® 102

Performs well in most machining applications. This product is generally used in sawing, drilling, turning, boring, milling and grinding applications. It is ideal for use on ferrous and non-ferrous metals.

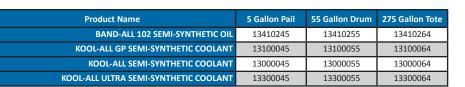

- Contains no chlorine, sulfur, or phosphorous-based extreme pressure additives
- Contains no nitrites, phenols, or formaldehyde compounds
- Outstanding corrosion protection
- Excellent tramp oil rejection
- Good detergency and high work piece visibility
- Offers long fluid life
- Easily maintained
- This product is dyed green

KOOL-ALL®

Premium cutting and grinding metal working fluid designed with a high oil content for increased lubricity for medium to heavy-duty machining. Excellent in high pressure coolant delivery systems and is formulated to contain no extreme pressure additives.

- Long sump life
- Excellent tool life and surface finish
- Ideal for medium to heavy-duty machining operations
- Suitable for use with mild steels, stainless steels, aluminum and most other ferrous and non-ferrous metals
- Product is dyed blue

KOOL-ALL GP

A general purpose, cost-effective metalworking fluid designed for light to medium machining.

- Contains no extreme pressure additives
- Ideal for light to medium machining, sawing, drilling, turning, boring and milling
- Suitable for use with ferrous and non-ferrous metals

KOOL-ALL ULTRA 🥑

A premium, doubly-concentrated cutting and grinding metalworking fluid with increased biocides and corrosion inhibitors. Excellent in high-pressure coolant delivery systems and is formulated to contain no extreme pressure additives with an 18 month shelf life.

- Outstanding tool life, surface finish and corrosion protection
- Microbial control for coolant stabilization
- pH control for anti-rust control
- Lower cost due to less maintenance using less product with fewer changeovers
- Mild to skin/operator sensitivity low
- Suitable for use with ferrous and non-ferrous metals.

Soluble Oils

BAND-ALL® 101

Performs well in most machining applications. This product is dyed green and is generally used in sawing and tapping operations. It is non-staining to most copper and aluminum alloys.

- Premium extreme pressure additives
- Ideal for medium to heavy-duty machining
- Excellent corrosion protection
- · Good surface finish and excellent tool life

POWER-CUT®

Premium soluble oil specially designed with a chlorinated extreme pressure additive package.

- Ideal for sawing, tapping and heavy-duty machining applications
- This product is non-staining to most copper and aluminum alloys

POWER-CUT CF

Premium soluble oil designed to achieve lubrication without the use of typical extreme pressure additives. Specially designed to perform across a broad range of metals in a variety of machining operations.

- Excellent lubricity and cooling, good rust protection tool life and surface finish
- Non-chlorinated

POWER-CUT GP

General purpose biostable cutting and grinding fluid. This product is designed for use in light to medium-duty machining.

- Ideal for sawing, turning, boring, milling and grinding
- Suitable for use with a variety of materials including ferrous metals, super alloys and many aluminum types

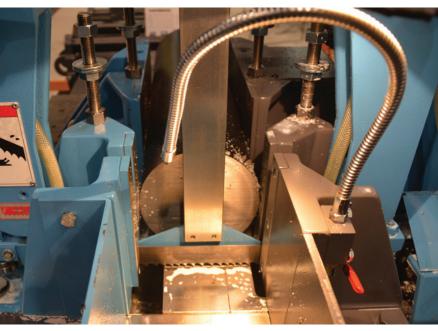

POWER-CUT ULTRA

Doubly concentrated soluble oil with more additives and emulsifier package for medium to heavy-duty machining operations on most materials.

- Microbial control for coolant stabilization
- pH control for anti-rust control
- Lower cost due to less maintenance using less product with fewer changeovers
- Two-year shelf life
- Suitable for use with ferrous metals, cast iron, stainless steel and non-ferrous alloys
- Non-staining to most copper alloys and aluminum

Straight Oils

BRIGHT-EDGE® 80

A low viscosity oil specially formulated with anti-weld and lubricity agents. The combination of lower viscosity, high-penetrating ability, good heat removal and excellent lubricity a lows for heavy-duty machining at faster speeds than normally achievable with cutting oils.

- Chlorine and sulfur extreme pressure additives
- Ideal for high-speeds awing, machining and deep cavity machining
- Suited for use with ferrous metals and super alloys
- Not suited for use with materials susceptible to sulfur staining

BRIGHT-EDGE 150

A low viscosity oil specially formulated with anti-weld and lubricity agents. This product contains no sulfur and is non-staining to most non-ferrous metals.

- Ideal for low speed
- Low smoking
- Low-medium viscosity oil
- Ideal for sawing, drilling and grinding
- Suited for steel, stainless steel and aluminum alloys

BRIGHT-EDGE 300 & 300-PDA

A medium viscosity oil specially formulated with chlorine free anti-weld agents and low sulfur levels. Contains high levels of lubricating agents that reduce the friction forces and heat generated during cutting actions.

- Ideal for screw machining, drilling, milling and turning
- Suited for use with ferrous and non-ferrous metals
- Low misting
- Resistant to tackiness build-up

EDM CUTTING OIL

A high quality paraffinic fluid that is stable for use in the Electrical Discharge Machining (EDM) industry. This product is manufactured with low impurity levels to meet the demands of low electrical conductivity.

- Rapid settling of particulate contamination
- Good flushing qualities
- Low skin irritation
- Low smoking

HONE-ALL® 80-88

Premium light oil-based fluid suitable for cutting, threading and honing operations.

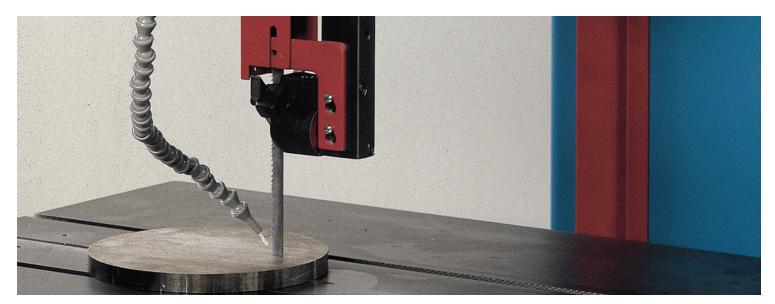

- Formulated with a synergistic blend of wetting agents and extreme pressure additives
- Good surface finishes and long tool life
- Ideal for use on ferrous metals and stainless steel

Direct Application and Aluminium (AL) Metalworking Fluids

AL-500®

- A vegetable-based lubricant.
- A light to medium-duty lubricant for general machining
- Suitable for use on ferrous and non-ferrous metals

AL-700[®] MIST AND MQL

A metalworking fluid derived from natural oils.

- A light to medium-duty lubricant for general machining
- Suitable for use on ferrous and non-ferrous metal

AL-2000® MICRO

A full synthetic lubricant ideal for most turning, general tapping, machining drilling, milling, cutting and sawing operations.

- Suitable for steel, use and on mild other steel, ferrous and aluminum, non-ferrous titanium, stainless steel and other ferrous and non-ferrous metals
- Food grade approved

AL-2100® MIST

Universal synthetic lubricant formulated from ester oil. Used as cutting and spray oil and is designed for use in minimal lubrication systems. It is suitable to use for sawing and machining operations for steel and non-ferrous metals.

- Recommended for use on circular saws
- Does not tend to smoke and is suitable for use in wide range of ambient temperatures (from -15°C)
- Suitable for sawing of aluminum blocks and profiles
- Easily biodegradable

AL-3000[®] MICRO

A natural blend of synthetic-based products ideal for medium to heavy-duty machining operations.

- Suitable for use on mild steel, aluminum, titanium, metals stainless steel and other ferrous and non-ferrous
- Contains a versatile extreme pressure additive
- Designed for use in air-driven spray mist systems or MQL equipment
- Contains a versatile extreme pressure additive

Aerosols

GAGE BLOCK CLEANER

A premium industrial cleaner designed to safely and effectively clean all gage blocks.

- Removes dirt, grime, grease and oil
- Non-abrasive cleaning action
- Prolongs gage block life
- Specially formulated with lubricity agents

MACHINE CLEANER POLISH

A premium industrial machine cleaner designed for use on all painted machine surfaces.

- Removes grease, oil and shop grime
- Leaves a protective coating behind
- Improves appearance on new and old machines

MICR-ALL® 3000

A high-efficiency, direct application lubricant that forms a high strength molecular coating on the cutting edge of the tool, preventing heat build-up and decreasing down time.

- Clean mist application
- Extends tool life
- Non-polluting and non-toxic

PEN-ALL[®] 4000 PENETRATING OIL

A biodegradable industrial strength fast acting penetrating and lubricating oil. This product loosens seized and corroded nuts, bolts and other frozen metal mechanisms.

- Clean mist application
- Renewable resource technology
- Penetrates in hard to reach areas
- Non-polluting and non-toxic
- Reduces maintenance costs

STEEL INK BLUE

A high-quality industrial layout ink designed for precise layout work on dies, templates, tool and machine parts.

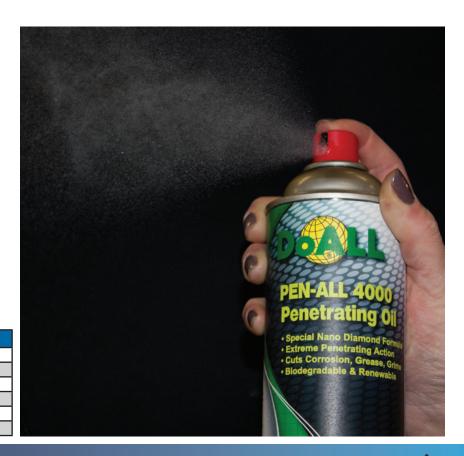

- Smooth non-coating
- Dark blue color for visibility of scribed lines
- Does not contain fluorocarbon propellant

STEEL INK REMOVER

An effective, premium industrial solvent ink remover designed to efficiently and quickly remove Blue Steel Ink, as well as other layout fluids.

- Removes ink, oils, greases, dirt and grime
- Non-abrasive cleaning action
- Fast drying
- Leaves no residue

AUTOMATIC TRANSMISSION FLUIDS

Multipurpose automatic transmission fluid specially formulated to meet the service requirements on a wide variety of applications. This product is designed for new generation, electronically controlled transmissions.

Available products: ATF MP #3 ATF TYPE D34

GEAR OILS

These products are formulated to meet or exceed industry gear lube standards such as The American Gear Manufacturing Association (9005.094 & 250.4) and U.S. Steel (224). High quality base oils are blended with special non-corrosive phosphorus extreme pressure additives to enhance the load bearing capabilities of each grade.

- Ideal high temperature stability
- Resists oxidation
- Non-foaming

HYDRAULIC OILS

Premium quality anti-wear, rust and oxidation inhibited lubricating oils. The several viscosity grades meet or surpass the requirements of major manufacturers and users of hydraulic equipment.

- Increased water tolerances than conventional anti-wear hydraulic oils
- Suitable to withstand the combination of water and heat better than standard hydraulic oils
- Specially formulated with a thermally stable, modified zinc dialkyldithiophosphate (ZDDP) additive
- Withstands high-temperature operating conditions Available viscosity grades:

ESL HYDRAULIC ÓIĽ AW 22 ESL HYDRAULIC OIL AW 32 ESL HYDRAULIC OIL AW 46 ESL HYDRAULIC OIL AW 68 ESL HYDRAULIC OIL AW 100 RUST &OXIDATION (R&O) HYDRAULIC OIL

Machine Lubricants

30 WT ND NON-DETERGENT OIL

High quality motor oil recommended for use in all applications that specify a non-detergent oil such as certain air compressors and other industrial applications.

- Formulated to provide good wear protection
- Resistance to oxidation, rust and corrosion and foaming

MACHINE 100 MP (RECON)

A R&O-inhibited, anti-wear circulating oil developed for use in circulation systems, centrifugal air compressors, geared turbines, lightly loaded enclosed gear drives and many other industrial applications.

- Contains a low level of ashless (zinc-free) additive
- Mild wear protection qualities

SPINDLE OILS

Light bodied oils designed for close tolerance, high-speed spindle bearings found in machine tools. These high quality oils provide excellent lubrication protection to precision bearings.

- Designed to meet industry standards
- Low foaming
- Fortified to resist oxidation

Prevents corrosion
 Available grades:
 SPINDLE OIL No. 10
 SPINDLE OIL No. 22

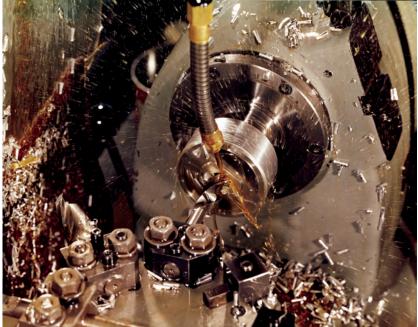

WAY LUBRICANTS

A Rur exercise of the second s

Premium quality, heavy-duty way oils formulated to provide high lubricity and excellent slip-stick performance in every day use. These products are formulated with special extreme pressure additives to reduce friction between the carriage and slide ways allowing smoother operation.

- Low in sulfur and fatty acids
- Ideal for use with water-based cutting fluids
- Does not promote odor producing bacteria
- Offers excellent demulsibility

Cleaners

DOKLEEN[®] 2007

An effective cleaner designed for removing soils and metal fines from machinery and hard to reach places within the coolant reservoir system. It is developed for use as an in-process conditioner and is added tank side into existing coolant on a weekly basis in order to restore the coolant and extend sump life.

- Removes "rotten egg" odor
- Cleans most common metalworking fluid contaminants
- Eliminates bacteria and removes fungus growth
- Effective at restoring loose emulsions in soluble oil systems caused by tramp oil and bacteria

DOKLEEN 3004

An oil emulsifying cleaner designed for removing soils and oil from machinery and the manufacturing floor. It is developed for use as an in-process cleaner and is added tank side into existing coolant.

- Lower pH enables compliance with waste stream restrictions
- Cleans most common metalworking fluid contaminants
- Eliminates bacteria and removes fungus growth
- Minimizes downtime for sump cleaning

HEAVY-DUTY MACHINE CLEANER

Quickly and effectively aids in the removal of mineral oils, fatty oils, polishing compounds, greases and grime from machine surfaces.

- Protects machine efficiency
- Retains integrity of machine tool paint films
- Spot cleaning of workplace floor

KLEEN-FLUSH®

A water-based non-ionic cleaner designed to be used as a general purpose cleaning of cutting and grinding fluid systems before charging with fresh coolant.

- Ideal for removing grease, oil, sludge and scum
- Effective in minimizing or eliminating bacteria and fungus
- Non-foaming

KLEEN-SURF®

A specially design industrial cleaner for use in cleaning granite surface plates commonly found in inspection and gage areas.

- Readily removes grease, oil and other shop grime from plates
- Leaves no filmy residue
- Preserves plate accuracy
- Non-abrasive
- Deep cleaning

KLEEN

LUA GALIDIS CANADO No. 1000

Specialty Fluids

DEFOAM®

An organic (non-silicone) based defoamer specially formulated for general purpose use in water soluble cutting and grinding fluids.

- Add tank side to eliminate foaming issues
- Prolongs coolant life

RUST PREVENTATIVE 100

Solvent-based corrosion preventative that provides superior indoor protection on ferrous substrates. It will displace water and water based fluids from a damp part or machine. Dries to a clear thin film that can be easily removed.

- Excellent protection in humid conditions
- Superior indoor corrosion protection
- Easily removed with aqueous alkaline cleaners

ABA SECOND Market Marke

RUST REMOVER

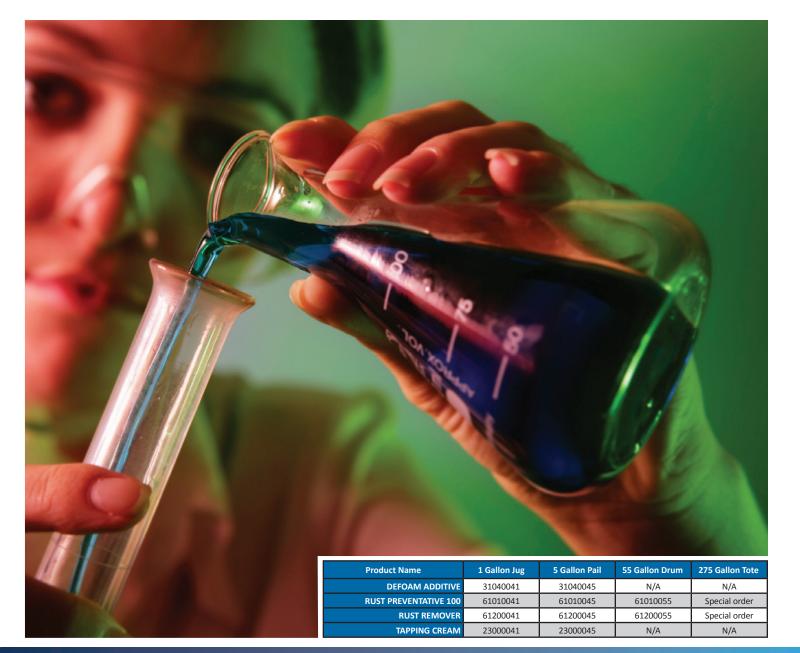

Dissolves rust and iron stains from stainless steel, chrome and other metals.

- Minimal scrubbing
- Prevents new stains from forming

TAPPING CREAM®

Offers the necessary lubricity to assure the desired finish as well as increased tool life. Product does not contain sulfur. This product can also be used for hand tapping of tough materials.

- Designed for machine tapping of softer metals such as aluminum, bronzes and brasses
- Safe to use with copper-bearing alloys

Specialty Products

UUL-SAVEN

BELT-MAGIC®

Wax stick provides a smooth, non-staining finish on aluminum, brass, magnesium and other non-ferrous and ferrous metals. Also used for other cutting, milling and drilling operations where non-circulating lubrication is required.

- Extends the life of abrasive belts
- Helpful to immediately add extra lubrication

TOOL-SAVER®

Specially compounded to combat detrimental abrading and friction between the work and the tool.

- Extends tool life
- Improves finish
- Reduces overall production costs
- Lowers power requirements

MAGNETIC CHIP REMOVER

Magnetic chip remover is a stainless steel round rod with a strong magnet inside the rod.

- Collects unwanted metal chips
- Increases cleanliness in the workplace
- Easy to use

REFRACTOMETER

A handheld instrument that measures how light is refracted through a liquid. When using a refractometer for metalworking fluids, it is the coolant concentration that causes light to refract.

- Economical, easiest and quickest way to monitor coolant concentration
- Accurate Brix scale reading
- For use with water soluble coolants and brands

SUMP DEODORIZING TABLETS

Odor eliminating tablets designed for small sumps of 200 gallons or less.

- Eliminates and prevents odors
- Reduces biofilm, a breeding ground for bacteria and fungi
- Neutralizes endotoxins released from the micro-organisms
- Contains no formaldehyde or formaldehydereleasing chemicals
- Leaves no residue

Product Name	Part Number
BELT-MAGIC 16 oz. LUBRICANT STICK	24002201
TOOL-SAVER 16 oz. LUBRICANT STICK	24000001
MAGNETIC CHIP REMOVER	226028
REFRACTOMETER	229616 or XTERF18
SUMP DEODORIZING TABLETS (15 tablets)	34800099

Refractometer

A refractometer is a hand held instrument that measures how light is refracted through a liquid. When using a refractometer for metalworking fluids, it is the coolant concentration that causes light to refract. Properly maintaining coolant concentrations will assist in preventing disruption in production due to cleanouts, costly disposal, less coolant waste, will protect the tool and machine, provide better cut results and avoid leaning the alkalinity reserve that may cause rusting and encourage bacteria.

Using a refractometer is the most economical, easiest and quickest way to measure coolant concentration and can be used with all coolant types and brands. It is important to note that all coolants have their own distinctive concentration readings and scale.

Metal Cutting Band Saws

DoALL® Sawing was founded in 1927 by Leighton A. Wilkie, who invented and manufactured the first metal cutting band saw in 1933. We continue to be a global leader for ALL your sawing needs! DoALL provides manual, semi-automatic and automatic metalworking band saws.

Even though we specialize in metal cutting band saws, our legacy continues to parts and service as well. DoALL Sawing Products offers a complete line of service, replacement and repair parts for our current line of band sawing machines. Our skilled team of service professionals - spread across United States and around the globe - are trained in service and repair of the entire line of DoALL band saws as well as competitive machines.

Band Saw Blades

DoALL invented the Bi-Metal band saw blade and released many improvements over the vears. Today we are still the trendsetter in band saw blade technology. We have production facilities in the USA, Canada, Mexico as well as in Europe. Besides having our own team of dedicated band saw blade experts, we have factory authorized distributors around the world who are focused on band saw blades, with many of them managing their own weld centers. Our network is able to provide technical support and fast response to any issue. We are committed to your satisfaction and look forward to serving you.

Commitment To A Greener Future

DoALL continues to expand its product line to offer innovative and environmentally conscious metalworking fluids. DoALL strives to provide environmentally responsible and worker safe products to our customers that are:

- Readily biodegradable
- Non-polluting
- Renewable resource technology
- Low misting
- Non-toxic (using natural ingredients that are less hazardous)
- Lower volatile organic compounds (VOC)
- Recyclable packaging options

Using our years of coolant experience we developed the Ultra Series (marked with the symbol shown above). Ultra fluids are a doubly concentrated form of some of our existing products specially designed to eliminate odors, extend sump life, provide pH control for anti-rust properties, enforce microbial control for coolant stabilization and permanently reject tramp oil for cleanliness. This concentrated advantage allows us to provide more coolant additives and less water in the product unlike traditional coolant, offering a reduction in freight costs. Combined with our environmentally friendly recyclable containers we offer the most economical and ecological choices around.

Additional Sawing Resources

DoALL replacement and repair parts are now available 24-hours a day online at www.DoALLsaws.com/store

Class includes: Four hour training on the elements of sawing (machines, blades and fluids).

Sign up for our DoALL University training program and sharpen your skills today!

Free Sawing Analysis: DoALL offers complimentary saw inspections and sawing effeciency analysis. Visit DoALLsaws.com/free-sawing-analysis
