A LINCOLN ELECTRIC COMPANY

**HVAC/R & PLUMBING CATALOG**

# THE HARRIS PRODUCTS GROUP HAS BEEN MANUFACTURING QUALITY BRAZING PRODUCTS FOR OVER 110 YEARS.

EACH DAY, HARRIS SETS OUT TO MAKE THE BEST AND MOST COMPLETE LINE OF INDUSTRIAL GRADE TOOLS IN THE WORLD. WHY? BECAUSE SUPERIOR RESULTS COUNT TO PROFESSIONAL TRADESMEN. HAVING THE RIGHT TOOLS FROM HARRIS WILL DELIVER A JOB WELL DONE, EVERY TIME. WE'RE GOING TO KEEP DOING WHAT WE DO BEST, SO YOU CAN DO WHAT YOU DO BEST. FOR THE BEST AND MOST COMPLETE LINE OF INDUSTRIAL GRADE PRODUCTS, **TURN TO THE PROS – TURN TO HARRIS.**

# ABOUT THE HARRIS PRODUCTS GROUP

We are leaders in developing brazing and soldering products to meet the industry needs for new metal joining methods. We are certified to ISO 9001 and ISO 14000 standards. We have developed proprietary manufacturing technology to ensure the highest standards of quality and traceability.

Our experienced sales and technical personnel are trained to assist our customers in producing sound, cost effective brazed assemblies. Our international presence means we can assist our customer's operation anywhere in the world. Harris is backed by the financial strength and technical resources of The Lincoln Electric Company -

**THE GLOBAL LEADER IN WELDING SYSTEMS AND FILLER METALS.**

# THE HARRIS PRODUCTS GROUP

The Harris Products Group was formed by combining two strong names in the brazing business—Harris Calorific and J.W. Harris. The Harris Products Group is a world leader in metalworking products used in the brazing, soldering, welding, cutting, and gas distribution industries. The combined company offers excellence in the manufacture of:

- Brazing and soldering alloys
- Brazing and soldering torch equipment
- Preforms, rings, and return bends
- Welding alloys
- Fluxes
- Industrial and specialty gas regulation equipment

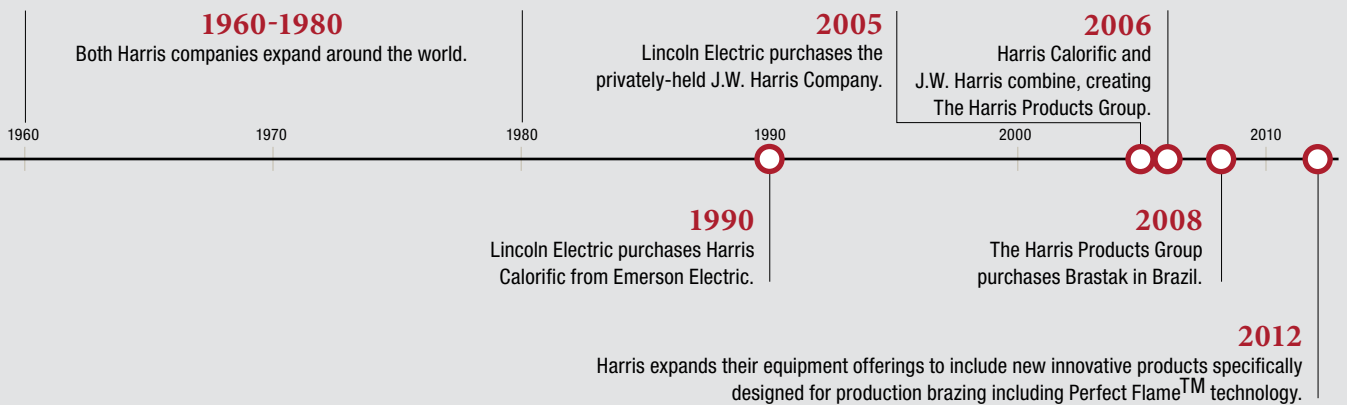

The Harris Products Group is a wholly-owned subsidiary of The Lincoln Electric Company. Lincoln has more than 50 manufacturing locations, including operations and joint ventures in 20 countries and a worldwide network of distributors and sales offices covering more than 160 countries.

## THE HARRIS PRODUCTS GROUP HISTORY

## MANUFACTURING FACILITIES

Based in Mason, Ohio, The Harris Products Group has four manufacturing locations and a worldwide network of distributors and sales offices covering more than 90 countries.

## FILLER METALS SELECTION CHART

PRODUCTS	QQ-B-654A	AMS	AWS A5.8	Ag	Cu	Zn	Ni	Sn	OTHER	SOLIDUS		LIQUIDUS		FLUIDITY RATING*	TYPICAL APPLICATION	
										°F	°C	°F	°C			
DYNAFLOW®				6	87.9					6.1P	1190	643	1465	796	3	Premium alloy for copper or brass. Excellent strength and ductility, use as replacement for 15.
BLOCKADE®			BCuP-9			REM		6.5	6.5P Si		1178	637	1247	674		For copper or brass. Lower brazing temperature, excellent replacement for many silver bearing BCuP alloys.
HARRIS 0			BCuP-2		92.9				7.1P		1310	710	1475	802	5	For copper. Requires medium fit-up, .002-.007" clearance.
STAY-SILV® 2			BCuP-6	2	91.0				7.0P		1190	643	1450	788	4	Broadens melting range of 0. For copper or brass. Clearance range .002-.005".
STAY-SILV® 5			BCuP-3	5	89.0				6.0P		1190	643	1500	816	3	For copper or brass. Used to bridge gaps where close fit-up can't be maintained.
STAY-SILV® 6				6	87.5				6.5P		1190	643	1425	774	5	For copper or brass. Medium range alloy for applications with clearances or .002-.005".
STAY-SILV® 15	BCuP-5		BCuP-5	15	80.0				5.0P		1190	643	1480	804	3	For copper or brass. Useful for wide clearance. 002-.006". Good ductility.
LOW FUMING BRONZE			RBCuZn-C		58	40		1	1 Fe		1590	866	1630	888		For steel and cast iron. Braze welding type alloy with flux coating.
SAFETY-SILV® 25				25	43	30		2			1270	688	1435	779	5	For steel to copper alloys. Moderate ductility. For dissimilar metals joint should be in compression on cooling.
SAFETY-SILV® 30	BAG-20		BAG-20	30	38	32					1250	677	1410	766	6	Use with ferrous and non-ferrous base metals. Flow suitable for bridging gaps.
SAFETY-SILV® 35			BAG-35	35	32	33					1250	677	1350	732	5	Ferrous and non-ferrous base metals. Moderate temperature and good ductility.
SAFETY-SILV® 38T			BAG-34	38	32	28		2			1220	660	1325	718	7	Low-temperature, free-flowing alloy with exceptional fillet-forming quality. For ferrous and non-ferrous metals.
SAFETY-SILV® 40				40	30.5	29.5					1250	660	1350	732	5	For steel, nickel, and copper alloys. Suitable for wider clearance yet provides good ductility.
SAFETY-SILV® 40T			BAG-28	40	30	28		2			1220	660	1310	710	6.5	Good flow properties. Suitable for ferrous and non-ferrous base metals.
SAFETY-SILV® 45	BAG-5		BAG-5	45	30	25					1225	663	1370	743	6.5	General purpose filler for steel and copper alloys. Melting range useful for wide clearances.
SAFETY-SILV® 45T			BAG-36	45	27	25		3			1195	646	1265	685	7	Good flow properties. Suitable for ferrous and non-ferrous base metals.
SAFETY-SILV® 50			BAG-6	50	34	16					1270	688	1425	774	5.5	Often used to braze galvanized steel but suitable for bridging gaps in other ferrous and non-ferrous metals.
SAFETY-SILV® 50N		4788	BAG-24	50	20	28		2			1220	660	1305	707	7	For stainless steel applications to prevent crevice corrosion.
SAFETY-SILV® 56	BAG-7	4763	BAG-7	56	22	17		5			1145	618	1205	652	8	For ferrous and non-ferrous alloys. Often used to braze stainless steel for food service. NSF 51 listed.
AL-BRAZE™ 1070			BAISI4								1070	577	1080	582		For brazing aluminum base metals.
AL-BRAZE™ 4043											1065	574	1170	632		Aluminum repair, brazing of splits/holes. Wider melting range than Al-Braze™ 1070.
ALCOR®											824	440	824	440		For the repair of heat exchangers, air conditioners, aluminum alloy condensers and other applications.
ALSOLDER™ 500						15		85			391	199	482	250		A low temperature solder for aluminum and copper.
NICK®											438	225	729	387		Fit small tight fitting connections and to bridge gaps in large, loose fitting, or non-concentric pipe.
SPEEDY®											450	232	555	290		Faster melting range. Allows operator to fit small, tight fitting pipe connections quickly.
STAY-BRITE®				4				96			430	221	430	221	10	Low-temperature solder for all metals except aluminum. Used in refrigeration joints. NSF 51 listed.
STAY-BRITE® 8				6				94			430	221	535	279	8	Similar to Stay-Brite®. Plastic range useful in bridging wider gaps. Certified to NSF 51 listed.
BRIDGIT®											460	238	630	332	6	Lead-free, nickel & silver-bearing solder of exceptional strength & capping ability. NSF 61 listed.

\* The higher the fluidity rating, the faster the alloy flows within the melting range.

**WARNING** Protect yourself and others. Read and understand this information. BRAZING AND SOLDERING ALLOYS AND FLUXES MAY PRODUCE FUMES AND GASES HAZARDOUS TO YOUR HEALTH. • Before use, read and understand the manufacturer's instructions, Material Safety Data Sheets (MSDS) and your employer's safety practices. • Keep your head out of the fumes. • Use enough ventilation, exhaust at the flame or both, to keep fumes and gases from your breathing zone and the general area. • For maximum safety, be certified for and wear a respirator at all times when welding or brazing. • Wear correct eye, ear and body protection. • Do not touch live electrical parts. • See American National Standard Z49.1, Safety in welding, cutting and allied processes, published by the American Welding Society, 500 N.W. LeJeune Road, Miami Florida 33126; OSHA Safety and Health Standards, 29 CFR 1910, Available from the U.S. Government printing office, Washington, D.C. 20402. • MSDS are available for all Harris products. MSDS contain detailed safety and health information about possible hazards associated with use of these products. MSDS are available from your employer or by contacting the Harris Products Group, Mason, OH 45040.

**PRO INFO:**

**ESTIMATING AMOUNTS OF BRAZING ALLOYS REQUIRED**

- 1 Locate the tube diameter to be joined and the wire size to be used. Where the row and the column intersect is the approximate length in inches of alloy required per joint.
- 2 Multiply the length of the alloy needed per joint by the total number of joints.
- 3 To convert the total length to pounds or troy ounces, divide by the inches of alloy/lb. in row A or the inches of alloy/troy oz. in row B.

ESTIMATING BRAZING ALLOY AMOUNTS						
TUBE DIAMETER	3/64" WIRE	1/16" WIRE	3/32" WIRE	.050"x 1/8" ROD	TIP SIZE	ESTIMATED ACETYLENE USE (C.F.H.)

 The above figures are approximate and will vary depending on joint clearance, depth, and operator technique.

# PHOS COPPER ALLOYS

THE BRAZING INDUSTRY'S FRONT RUNNER IN  
DEVELOPING THE TECHNOLOGY TO CONTROL  
PHOSPHOROUS CONTENT.

THE MELTING RANGE IS SO PRECISE THAT BRAZING OPERATORS NO LONGER NEED TO MAKE TEMPERATURE ADJUSTMENTS FROM ONE BATCH OF FILLER METALS TO THE NEXT. OPERATORS KNOW THAT WITH HARRIS ALLOYS, THE RESULT WILL BE THE SAME WITH EVERY BATCH, EVERY TIME. ITS TECHNOLOGY IS SO ACCURATE THAT THE HARRIS PRODUCTS GROUP GUARANTEES USERS A LIQUIDUS TEMPERATURE VARIATION OF NO MORE THAN  $\pm 6^{\circ}\text{F}$  /  $\pm 3.3^{\circ}\text{C}$  - A MUCH TIGHTER STANDARD THAN INDUSTRY REQUIRES.

## Dynaflow®

Dynaflow® is an exceptionally pure phos/copper/silver brazing alloy recommended for all copper to copper and copper to brass cooling applications. This alloy has provided decades of serviceability and economics to our customers. Dynaflow® is a premium, medium range silver alloy developed to mirror the performance characteristics of the 15% silver brazing filler metals. Excellent for brazing both tight and loose fitted application. It is a leading choice for operators, service technicians, and end users.

## BLOCKADE

Blockade® is the first of a new family of silicon/tin alloy brazing filler metals. Blockade® is engineered to join copper, brass, or bronze. Blockade's innovative composition provides the ability to form a large shoulder, or cap, at the braze connection. Excellent for all industries.

## Low Fuming Bronze (LFB)

A braze-welding alloy used to braze steel, steel alloys, and cast iron. LFB is frequently used to braze steel brackets, straps, angles and related fittings. Rod is deposited by melting it along the length of the joint. This alloy requires wider joint gaps, fillets, or v-grooved butt joints for best results.

## HARRIS 0

Low cost alloy for many copper-to-copper applications where moderate fit-up can be maintained and brazing temperature is not critical.

## Stay-Silv® 2

Stay-Silv® 2 is an economical, low silver alloy, designed to broaden the melting range of Harris 0 and has proven useful in some specific applications where mechanical properties are less critical.

## Stay-Silv® 5

Stay-Silv® 5 is useful primarily where fit-up cannot be tightly controlled. Stay-Silv® 5 is a medium melting range alloy.

## Stay-Silv® 6

Stay-Silv® 6 is slightly more fluid and can be used where closer tolerances are available and is somewhat more ductile than Harris 0.

## Stay-Silv® 15

Stay-Silv® 15 is the industry standard for air conditioning/refrigeration applications. Its melting range is useful in filling wider clearances while providing good service ductility.

Save money using Harris phosphorous controlled products.  
 $\pm 38^{\circ}\text{F} / \pm 3.3^{\circ}\text{C}$  liquidus point fluctuation from batch to batch.

PHOS COPPER

# DYNAFLOW

## PHOS COPPER ALLOYS

MODEL SHOWN:  
D620F15P

### DESCRIPTION

Dynaflow® is an exceptionally pure phosphorus/copper/silver brazing alloy recommended for all copper-to-copper and copper-to-brass applications. Dynaflow® is a premium, medium range, silver alloy. It has excellent strength and ductility. It can be used as a replacement for 15% silver. Perfect for brazing both tight and loose fitted applications. It is a great choice for HVAC/R technicians.

### DETAILS:

**Solidus:** 1190°F / 643°C

**Liquidus:** 1465°F / 796°C

**Fluidity Rating:** 3

**Classification:** N/A

### Typical Applications:

Premium alloy for copper or brass.

Recommended joint clearance  
.003 - .006" (.076 - .152 mm).

# BLOCKADE

## PHOS COPPER ALLOYS

MODEL SHOWN:  
BK220R15P

### DESCRIPTION

Blockade®'s innovative composition provides the ability to form a large shoulder or cap at the braze connection. It is a low melting temperature alloy which is very fluid and fast flowing. Best for tight fitting connections under two inches diameter and great for copper to brass applications like solenoid valves, ball valves, distributors, and schrader valves. Blockade® is self-fluxing on copper and its lower melting temperature makes it an excellent choice for brass.

### DETAILS:

**Solidus:** 1178°F / 637°C

**Liquidus:** 1247°F / 674°

**Fluidity Rating:** 7

**Classification:**

AWS A5.8 BCu-P9

### Typical Applications:

For copper or brass. Lower brazing temperature, excellent replacement for many silver bearing BCuP alloys. Can also be used to replace some BAg alloys. Recommended joint clearance .002 - .005" (.058 - 0.127 mm).

PART NO.	DESCRIPTION	DIA	LENGTH	PRESENTATION	PER PACKAGE	MASTER	CHEMICAL COMPOSITION

### DESCRIPTION

Recognized and trusted all over the world, this is our most popular copper-to-copper brazing alloy which is used for aftermarket HVAC installation and repair. Harris 0 has extremely consistent flow characteristics because it is manufactured from the purest raw materials. The bright and shiny appearance of our finished material shows our advanced manufacturing process capabilities and dedication to quality.

### DETAILS:

**Solidus:** 1310°F / 710°C

**Liquidus:** 1475°F/ 802°C

**Fluidity Rating:** 5

**Classification:**

AWS A5.8 BCuP-2

DIN8513 L-CuP7

### Typical Applications:

For copper or brass. Good for application where moderate fit-up can maintained and brazing temperature is not critical. Recommended joint clearance .002 - .007" (0.051 - 0.177 mm).

### PERFORMANCE FOCUS

Harris brazing alloys are the result of proprietary technology that precisely controls the phosphorus content above market standards.

### PHOSPHORUS CONTENT

The phosphorous content determines the precise melting temperature and performance. All Harris phosphorus/copper and silver/phosphorus/copper brazing alloys conform to +/- 6° Fahrenheit of the specified liquidus temperature. Conformity to such specification assures the operator of consistent brazing performance with every application. The advantage is apparent in automated brazing operations where control of flow temperatures can significantly reduce the incidence of rejects.

# STAY-SILV 2

## PHOS COPPER ALLOYS

MODEL SHOWN:  
2620F15P

### DESCRIPTION

Stay-Silv 2® is an economical, low silver alloy, designed to broaden melting range of Harris 0, and has proven useful in some specific applications where mechanical properties are less critical.

### DETAILS:

**Solidus:** 1190°F / 643°C

**Liquidus:** 1450°F / 788°C

**Fluidity Rating:** 4

**Classification:**

AWS A5.8 BCuP-6 BS1845 CP2

### Typical Applications:

For copper or brass. Sluggish flow, used for joints with wider clearance. Recommended joint clearance .003 - .005" (.076 - .127 mm).

# STAY-SILV 15

## PHOS COPPER ALLOYS

MODEL SHOWN:  
15320F1

### DESCRIPTION

For many years, the standards of the industry Harris Stay-Silv® 15 silver alloys has proven its value. This filler metal is excellent for situations in which close fit-up does not exist, and where thermal expansion and service vibration are involved.

### DETAILS:

**Solidus:** 1190°F / 643°C

**Liquidus:** 1480°F / 804°C

**Fluidity Rating:** 3

**Classification:**

AWS A5.8 BCuP-5 BS1845 CP1

### Typical Applications:

For copper or brass. Useful for wide clearances. Recommended joint clearance .002 - .006" (.076 - .152 mm).

## LOW FUMING BRONZE

MODEL SHOWN:  
015FC503POP

### DESCRIPTION

A braze-welding alloy used to braze steel, steel alloys, and cast iron. LFB is frequently used to braze steel brackets, straps, angles and related fittings. Rod is deposited by melting it along the length of the joint. This alloy requires wider joint gaps, fillets, or vee-grooved butt joints for best results.

### DETAILS:

**Solidus:** 1590°F / 866°C

**Liquidus:** 1630°F / 888°C

**Fluidity Rating:** N/A

**Classification:** N/A

### Typical Applications:

For steel, steel alloys, and cast iron.

# RING OF FIRE

## PHOS COPPER ALLOYS

MODEL SHOWN:  
RF15750

### DESCRIPTION

Ring of Fire™ is the perfect alternative for any brazing project. It's easy to use, gives you a consistent braze every time and meets the same high standards you expect from Harris.

### TYPICAL APPLICATIONS:

When you're working in the field, you need supplies and tools you can rely on and that make your job easier. Ring of Fire™ is a great alternative to rod for any brazing project. It's easy to use and gives you a consistent braze every time. With the same formulation, testing and standards as the Harris' signature Stay-Silv® 15 (15% silver alloy), you can now purchase it in ring form.

\*Free display with purchase of all sizes

## RING OF FIRE™

### 3 STEPS FOR A TIGHT, LEAK-PROOF JOINT USING STAY-SILV 15% BRAZING RINGS

- 1** Clean the tube, pipe and fittings to be brazed.
- 2** Place the Ring of Fire inside the coupling and insert the tube. Be sure the ring is at the bottom and touches the end of the tube.
- 3** Heat the tube and coupling, applying heat to all the parts. Heat will transfer throughout the part and draw the alloy through the capillary space. The molten braze will appear around the top of the coupling for easy visual verification of the completed braze.

PHOS COPPER

# HIGH SILVER ALLOYS

CADMIUM-FREE

THE HARRIS PRODUCTS GROUP MANUFACTURES A COMPLETE LINE OF CADMIUM-FREE, HIGH SILVER BRAZING ALLOYS. ONLY PURE BASE METALS ARE USED. PRECISION PRODUCTION PROCEDURES ENSURE CONSISTENCY IN PRODUCT QUALITY, COMPOSITION, CHEMISTRY, DIMENSION, AND PERFORMANCE.

**GET CONNECTED**

Go to [www.twitter.com/HarrisProducts](http://www.twitter.com/HarrisProducts)

## **SAFETY-SILV® 25**

A low cost, general purpose silver brazing alloy. Exhibits moderate ductility and slightly higher melting temperature than alloys containing higher percentages of silver and/or tin.

## **SAFETY-SILV® 30**

A cadmium free alloy with a melting range of 175°F (79°C) with good flow and good fillet forming quality. It produces high strength and ductile joints.

## **SAFETY-SILV® 35**

This smooth flowing alloy exhibits good ductility on ferrous and non-ferrous base materials. It is often used as an economical alternative to higher silver content alloys.

## **SAFETY-SILV® 38T**

This tin bearing alloy combines excellent fillet-forming characteristics with good flow properties. The addition of a small amount of tin provides qualities normally associated with alloys containing greater quantities of silver.

## **SAFETY-SILV® 40T**

Similar to 38T in its ability for excellent fillets and maintain good mechanical properties while flowing at a lower temperature.

## **SAFETY-SILV® 45**

Excellent general-purpose brazing alloy. Good ductility and capillary flow. Color is silver to light yellow. Available in flux coated (the flux is on the wire) which eliminates manual flux application.

## **SAFETY-SILV® 45T**

Performs like a 45% silver, cadmium bearing alloy, but is cadmium-free. Lower melting temperature than Safety-Silv® 45. Excellent fillet forming qualities. Produces high strength, ductile joints. NSF certified to NSF 51.

## **SAFETY-SILV® 50**

This composition has long been an industry standard. Similar to Safety-Silv® 45, it is an excellent choice for applications requiring a good blend of strength, ductility, and electrical conductivity.

## **SAFETY-SILV® 50N**

Often used to braze stainless steel to limit interface corrosion. It is also an excellent choice for tungsten carbide brazing applications.

## **SAFETY-SILV® 56**

High silver content alloy that makes premium quality brazes. Free flowing with unsurpassed capillary attraction and deep penetration. Ductility is high, and corrosion resistance is excellent. Offers highest elongation of silver brazing alloys. Can be used in the food processing industry. Silver color is an excellent match for stainless steel and silverware applications. NSF certified to NSF 51.

**SINCE 1986, THE HARRIS PRODUCTS GROUP HAS MANUFACTURED AND SOLD CADMIUM-FREE ALLOYS.**

Our cadmium-free alloys offer excellent performance characteristics and dependable results, while eliminating hazardous cadmium fumes. The charts throughout this brochure allow our customers to select the appropriate alloy. If you need additional technical assistance please call 1-800-733-4533 or visit our website at [www.harrisproductsgroup.com](http://www.harrisproductsgroup.com).

**WE MANUFACTURE A COMPLETE LINE OF LOW TEMPERATURE, FREE-FLOWING ALLOYS WITH EXCEPTIONAL FILLET FORMING QUALITY FOR FERROUS AND NON-FERROUS METALS.**

**AVAILABLE IN BARE RODS, FLUX COATED, AND FLUX CORED.**

# SAFETY-SILV 25

## HIGH SILVER ALLOYS

MODEL SHOWN:  
25350

### DESCRIPTION

A low cost, general purpose silver brazing alloy. Exhibits moderate ductility and slightly higher melting temperature than alloys containing higher percentages of silver and / or tin.

### DETAILS:

**Solidus:** 1270°F / 688°C

**Liquidus:** 1435°F / 779°C

**Fluidity Rating:** 5

**Classification:**

AWS A5.8 BAg-37

### Typical Applications:

For steel and copper alloys. Moderate ductility. For dissimilar metals, joint should be in compression on cooling.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION
25350	1/16" x 50 T.O. COIL	1/16"	-	50 T.O.	COIL	-	1 COIL	25% SILVER 43% COPPER 30% ZINC 2% TIN
25318L	1/16" x 18 x 15 T.O. TUBE	1/16"	18"	15 T.O.	TUBE	-	25 TUBES	
25550	3/32" x 50 T.O. COIL	3/32"	-	50 T.O.	COIL	-	1 COIL	

# SAFETY-SILV 30

## HIGH SILVER ALLOYS

MODEL SHOWN:  
30318L

### DESCRIPTION

A moderate temperature filler metal with flow characteristics useful for wider gaps.

### DETAILS:

**Solidus:** 1250°F / 677°C

**Liquidus:** 1410°F / 766°C

**Fluidity Rating:** 6

**Classification:**

AWS A5.8 BAg-20 QQ-B-654A  
BAg-20

### Typical Applications:

Use with ferrous and nonferrous based metals. Flow suitable for bridging gaps.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION
30250	3/64" x 50 T.O. COIL	3/64"	-	50 T.O.	COIL	-	1 COIL	30% SILVER 38% COPPER 32% ZINC

## WHAT IS A FLUIDITY RATING?

THE HIGHER THE FLUIDITY RATING, THE FASTER THE ALLOY FLOWS WITHIN THE MELTING RANGE.

# SAFETY-SILV 35

## HIGH SILVER ALLOYS

MODEL SHOWN:  
3531

### DESCRIPTION

A good selection for replacing the cadmium alloys. Safety-Silv® 35 joints are strong, ductile with brazing temperatures only slightly higher than cadmium-bearing 30 and 35 silver alloys.

### DETAILS:

**Solidus:** 1250°F / 677°C

**Liquidus:** 1350°F / 732°C

**Fluidity Rating:** 5

**Classification:**

AWS A5.8 BAg-35

### Typical Applications:

Use with ferrous and nonferrous based metals. Moderate temperature and good ductility.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION

# SAFETY-SILV 38T

## HIGH SILVER ALLOYS

MODEL SHOWN:  
38T550

### DESCRIPTION

This tin-bearing alloy combines excellent fillet-forming characteristics with good flow properties. The addition of a small amount of tin provides qualities normally associated with alloys containing greater quantities of silver.

### DETAILS:

**Solidus:** 1220°F \ 660°C

**Liquidus:** 1325°F \ 718°C

**Fluidity Rating:** 7

**Classification:**

AWS A5.8 BAg-34

AMS 4761

### Typical Applications:

Low-temperature, free-flowing alloy with exceptional fillet-forming quality. Use with ferrous and nonferrous based metals.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION
38T350	1/16" X 50 T.O. COIL	1/16"	-	50 T.O.	COIL	-	1 COIL	38% SILVER 32% COPPER 28% ZINC 2% TIN

HIGH SILVER ALLOY

# SAFETY-SILV 40

## HIGH SILVER ALLOYS

MODEL SHOWN:  
4033

### DESCRIPTION

Ductile, free-flowing alloy that offers economy, good penetration into tight connections and medium temperature. Silver to light yellow color like polished brass.

### DETAILS:

**Solidus:** 1250°F / 677°C

**Liquidus:** 1350°F / 732°C

**Fluidity Rating:** 5

**Classification:**

N/A

### Typical Applications:

For steel, nickel, and copper alloys. Suitable for wider clearance, yet provides good ductility.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION
4031	1/16" X 1 T.O. PACKAGE	1/16"	-	1 T.O.	COIL	-	25 PKS	40% SILVER 30.5% COPPER 29.5% ZINC

# SAFETY-SILV 40T

## HIGH SILVER ALLOYS

MODEL SHOWN:  
40T318L

### DESCRIPTION

Similar to 38T in its ability to form excellent fillets and maintain good mechanical properties.

### DETAILS:

**Solidus:** 1220°F / 660°C

**Liquidus:** 1310°F / 710°C

**Fluidity Rating:** 6.5

**Classification:**

AWS A5.8 BAg-28

### Typical Applications:

Good flow properties with lower brazing temperature. Designed for use on copper, brass, and steel.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION
40T350	1/16" x 50 T.O. COIL	1/16"	-	50 T.O.	COIL	-	1 COIL	40% SILVER 30% COPPER 28% ZINC 2% TIN

# SAFETY-SILV 45

## HIGH SILVER ALLOYS

MODEL SHOWN:  
4533

### DESCRIPTION

Excellent general-purpose brazing alloy. Good ductility and capillary flow. Color is silver to light yellow. Available in flux coated (the flux is on the wire) which eliminates manual flux application.

### DETAILS:

**Solidus:** 1225°F / 663°C

**Liquidus:** 1370°F / 743°C

**Fluidity Rating:** 6.5

**Classification:**

AWS A5.8 BAg-5

### Typical Applications:

General purpose filler for steel and copper alloys. Melting range useful for wide clearances.

## WHAT IS CAPILLARY ACTION?

Capillary action is a combination of surface tension and adhesion. It pulls the molten alloy through the joint, and allows you to braze in all positions.

HIGH SILVER ALLOY

**SAFETY-SILV**  
**45T**  
FLUX  
CORED

**HIGH SILVER ALLOYS**

MODEL SHOWN:  
**45TCW25004**

**DESCRIPTION**

Similar to 38T in its ability to form excellent fillets and maintain good mechanical properties.

**DETAILS:**

**Solidus:** 1195°F / 646°C  
**Liquidus:** 1265°F / 685°C  
**Fluidity Rating:** 7  
**Classification:**  
BAg-36

**Typical Applications:**

Good flow properties. Suitable for ferrous and non-ferrous base metals.

PART NO.	DESCRIPTION	DIA	LENGTH	WEIGHT	UNITS	PER PACKAGE	MASTER	CHEMICAL COMPOSITION
45TCW25004	2MM X 500 MM 4 STICK TUBE	2MM	500MM	4 STICKS	TUBE	-	50 TUBES	45% SILVER 27% COPPER 25% ZINC 3% TIN

**SAFETY-SILV**  
**45FC**  
FLUX  
CORED

**HIGH SILVER ALLOYS**

MODEL SHOWN:  
**45F3184**

**DESCRIPTION**

Performs like a 45% silver cadmium-bearing alloy but is cadmium-free. Lower melting temperature than Safety-Silv 45. Excellent fillet-forming qualities produces high-strength, ductile joints. NSF Certified to NSF 51.

**DETAILS:**

**Solidus:** 1195°F / 646°C  
**Liquidus:** 1265°F / 685°C  
**Fluidity Rating:** 7

# SAFETY-SILV 50

## HIGH SILVER ALLOYS

MODEL SHOWN:  
**5031**

### DESCRIPTION

Useful in brazing electrical connections and is a cadmium-free replacement for 50% silver alloys. It has a wide melting range suitable for bridging gaps where poor fit-ups are encountered.

### DETAILS:

**Solidus:** 1270°F / 688°C

**Liquidus:** 1425°F / 774°C

**Fluidity Rating:** 5.5

**Classification:** BAg-6

### Typical Applications:

Often used to braze galvanized steel, but suitable for bridging gaps in other ferrous and non-ferrous base metals.

HIGH SILVER ALLOY

# SAFETY-SILV 50N

## HIGH SILVER ALLOYS

MODEL SHOWN:  
**50N31**

### DESCRIPTION

This 50% silver alloy is a good replacement for the 3% nickel, cadmium alloy (AWS BAg-3). It is especially helpful where low brazing temperature must be maintained. It can be used to braze tungsten carbide, stainless steel, as well as other steel, copper, and nickel alloys.

### DETAILS:

**Solidus:** 11220°F / 660°C

**Liquidus:** 1305°F / 707°C

**Fluidity Rating:** 7

**Classification:** BAg-24

### Typical Applications:

Low melting braze alloy with good flow. Primarily, used for brazing stainless steel, nickel based alloys, and tungsten carbide inserts.

## HIGH SILVER ALLOYS

MODEL SHOWN:  
5631

### DESCRIPTION

High silver content alloy; makes premium-quality brazes. Free-flowing with unsurpassed capillary attraction and deep penetration with high ductility. Suitable for use in the food processing industry. Silver color is excellent match for stainless steel and silverware applications. NSF Listed

### DETAILS:

**Solidus:** 1145°F / 618°C

**Liquidus:** 1205°F / 652°C

**Fluidity Rating:** 8

**Classification:** BAg-7

### Typical Applications:

For ferrous and non-ferrous alloys. Often used to braze stainless steel for food service. NSF 51.

## FOR BRAZING

Our fast-flow Al-Braze® 1070 has become an industry standard. Our new Al-Braze® 4043 provides a wider melting range to help fill splits or gaps. Alcor® is a lower temperature flux cored solder that makes it easier to join low-melting aluminum base metals. An added benefit - the flux residue is non-corrosive. Al-Solder® 500 is the industry's most widely used product to join aluminum to aluminum and aluminum to copper.

## WHAT'S YOUR ALLOY

### AL-BRAZE® 1070, 4043

Superior brazing filler metals for joining aluminum. Al-Braze® 1070 is free-flowing with equaled capillary attraction. Al-Braze® 4043 provides a wider melting range. These alloys are not recommended for brazing aluminum directly to non-aluminum alloys as the joint may be brittle.

### ALCOR®

A very easy to use aluminum alloy with non-corrosive flux inside the wire; no external flux is required with this product. Designed for the repair of heat exchangers, air conditioners, aluminum alloy condensers and other applications. Very good fluidity with good capillary attraction. Post-braze cleaning unnecessary. Better than tin-zinc and aluminum silicon alloys for aluminum coil repair.

### AL-SOLDER® 500

Solder alloy for torch or iron. Used to join all solderable aluminum alloys to each other and to dissimilar metals. Also can be used for zinc die-cast. Forms excellent, corrosion resistant joints on the tough-to-solder aluminum alloys. Also beneficial as a high temperature solder on most other metals. Not recommended for magnesium.

### ALUXCORE™

Our ALUXCOR™ zinc aluminum alloys have non-corrosive and non-hygroscopic cesium flux with a lower melting temperature and wider melting range than aluminum silicon alloys. ALUXCOR 4047 has four different non-corrosive and non-hygroscopic flux combinations with no binder to fit your customer specific heating applications. The different formulas flux's release at increasing speeds in order from 15.1 being the slowest, to 15.4 being the fastest. The 15.3 formula is our most common for hand brazing applications but Harris now offers different formulas to best optimize flux release in controlled auto brazing heat applications.

# AL-BRAZE 1070

## ALUMINUM ALLOYS

MODEL SHOWN:  
1070K

### DESCRIPTION

Al-braze 1070 is free-flowing with unequaled capillary attraction, ductility and penetration. Excellent corrosion resistance.

### TYPICAL APPLICATIONS:

Superior brazing alloy for joining aluminum to aluminum. Excellent capillary attraction. Not recommended for brazing aluminum directly to non-aluminum alloys as the joint may be brittle.

PART NO.	DESCRIPTION	CHEMICAL COMPOSITION	SOLIDUS	LIQUIDUS
1070K	AL-BRAZE® 1070 KIT	88% ALUMINUM 12% SILICON	1070 °F 5777 °C	1080 °F 582 °C

# AL-BRAZE 4043

## ALUMINUM ALLOYS

MODEL SHOWN:  
4043K

### DESCRIPTION

Al-braze 4043 provides a wider melting range to help fill splits or gaps.

### TYPICAL APPLICATIONS:

Superior brazing alloy for joining aluminum to aluminum. Excellent capillary attraction.

PART NO.	DESCRIPTION	CHEMICAL COMPOSITION	SOLIDUS	LIQUIDUS
4043K	AL-BRAZE® 4043 KIT	95% ALUMINUM 5% SILICON	1065 °F 574 °C	1170 °F 632 °C

# ALCOR

## ALUMINUM ALLOYS

MODEL SHOWN:  
AI20010RC

### DESCRIPTION

A very easy to use aluminum alloy with non-corrosive flux inside the wire; no external flux is required with this product. Designed for the repair of heat exchangers, air conditioners, aluminum alloy condensers and other applications.

### TYPICAL APPLICATIONS:

ALCoR is a good choice for joining aluminum alloys of the 1000, 3000, and 6000 series. It can also be used to join aluminum to copper. Can be used on heat exchangers, air conditioners, aluminum alloy condensers and other cooling applications.

PART NO.	DESCRIPTION	CHEMICAL COMPOSITION	MELTING RANGE °F	MELTING RANGE °C
AL20010R	ALCOR® - 2MM DIA x 10" x 25 LB PACKAGE	98% ZINC 85% ALUMINUM	710 °F 725 °F	377 °C 385 °C
AL200RC	ALCOR® - 2MM DIA x COIL			

# AL-SOLDER 500

## ALUMINUM ALLOYS

MODEL SHOWN:  
500K

### DESCRIPTION

Solder alloy for torch or iron. Used to join all solderable aluminum alloys to each other and to copper to aluminum and other dissimilar metals. Also can be used for zinc die-cast.

### TYPICAL APPLICATIONS:

Forms excellent, corrosion resistant joints on the tough-to-solder aluminum alloys. Provides tensile strength of up to 20,000 PSI.

PART NO.	DESCRIPTION	CHEMICAL COMPOSITION	SOLIDUS	LIQUIDUS
500320	AL-SOLDER® 500 - 1/16" DIA x 20 LB SPOOL	15% ZINC 85% SN	391 °F 199 °C	482 °F 250 °C
50061H	AL-SOLDER® 500 - 1/8" DIA x 1 LB SPOOL

500K	AL-SOLDER® 500 - ALUM. KT. (ORM-D) NO AIR			

**BETTER PERFORMANCE**

- Core design releases the flux only after sufficient preheating so both the flux and alloy flows at the right time into the capillary
- Proprietary custom flux blends available for customer specific applications
- Strict flux percentage tolerance ensures that the flux is consistent throughout the wire for repeatable high performance flow of the alloy
- We only use non-corrosive and non-hygroscopic flux with no flux binder

**ALUXCOR**

**RoHS COMPLIANT**

**MADE IN THE USA**

**ALUMINUM ALLOYS**

MODEL SHOWN:  
**ZN78CW09020POP**

**DESCRIPTION**

With excellent strength and corrosion resistance for joining aluminum-to-aluminum or aluminum-to-copper or brass. Free flowing with unequalled capillary attraction, ductility, and penetration. Our ALUXCOR™ zinc aluminum alloys also have non-corrosive and non-hygroscopic cesium flux with a lower melting temperature and wider melting range than aluminum silicon alloys.

**TYPICAL APPLICATIONS:**

Residential HVAC , Automotive Appliance

**FLUX CORED ALUMINUM AND ZINC/ALUMINUM ALLOYS**

# LEAD-FREE SOLDERS

HVAC/R  
PLUMBING

THE HARRIS PRODUCTS GROUP OFFERS A WIDE RANGE OF SOLDERING ALLOYS FOR BOTH HVAC/R AND PLUMBING APPLICATIONS. EACH SOLDER PRODUCT MEETS THE HIGHEST STANDARD FOR CONSISTENCY AND PERFORMANCE.

**GET CONNECTED**

Go to [www.twitter.com/HarrisProducts](http://www.twitter.com/HarrisProducts)

## NICK®

Nick® is a lead-free plumbing solder specifically formulated as a replacement for the tin/lead solders. It has a wide melting range (438 °F - 729°C) that allows operators to fill tight fitting pipe connections and also to bridge gaps in large, loose fitting or non-concentric pipe. Its ease of application in all types of copper joints, makes it the preferred solder of experienced operators and is the most forgiving in the hands of the less experienced. Nick® is a patented alloy which meets all Federal requirements for lead-free solders mandated by the Federal Safe Drinking Water Act Amendments of 1986. (Public Law 99-339)

## SPEEDY®

Speedy® has a faster melting range, which allows operators to fill small, tight-fitting pipe connections quickly. Speedy® low temperature, free flowing nature decreases cycle time while reducing setup time. Speedy® can be used with Stay-Clean® paste or liquid flux, as well as Bridgit® paste flux. Speedy® is a lead-free, low temperature alloy formulated for joining copper pipe in potable water systems. This tin-based alloy conforms to the 1986 Federal Safe Drinking Water Act Amendment.

## STAYBRITE® / STAYBRITE® 8

Silver-bearing solders are often used throughout the air conditioning industry as an alternative to brazing alloys. Both Stay-Brite® and Stay-Brite® 8 produce an overall component with greater strength than a brazed component whose base metals are weakened by annealment from high brazing heat. Stay-Brite® solders bond with all of the ferrous and nonferrous alloys. Joints soldered with Stay-Brite® solders exhibit considerably higher than necessary elongation for sound, dissimilar metal joints and vibration applications. Stay-Brite® 8 is especially effective in filling loosely fitted couplings. Use for all metals with the exception of aluminum. This is a low temperature solder excellent for many HVAC connections.

## BRIDGIT®

Lead-free solder widely used in plumbing applications where lead-bearing solders are prohibited. Contains nickel to increase joint strength. A wide melting range makes Bridgit® an excellent alloy for large diameter fittings and ill-fitted or non-concentric pipes. Fills gaps and caps off easily and effectively. Meets or exceeds NSF/ANSI 61, Annex G/California AB 1953.

## 95/5®

Tin-antimony solder well suited for applications where moderately elevated temperature is a factor. With higher electrical conductivity and high fluidity, 95/5 is recommended for lead-free installation of small diameter, tight fitting connections. Not recommended for use on brass or HVAC connections.

## PRO INFO WHAT YOU NEED TO KNOW ABOUT SOLDERING

- Soldering is similar to brazing but at lower temperature, below 840°F / 450°C
- Solders are primarily tin based alloys with various additions of lead, silver, antimony, zinc, etc.
- Heat sources include soldering irons, gas/air torches, propane, and propylene
- Tin based solders have less strength than copper based brazing alloys, so solder joints require longer over-lap
- In soldering, usually 5X the minimum base metal thickness is specified to develop adequate strength

LEAD-FREE SOLDER

# STAY BRITE

## SILVER BEARING SOLDERS

MODEL SHOWN:  
SB31

### DESCRIPTION

Excellent general-purpose brazing alloy. Good ductility and capillary flow. Color is silver to light yellow. Available in flux coated (the flux is on the wire) which eliminates manual flux application.

### TYPICAL APPLICATIONS:

Engineered to provide a strong, ductile connection on copper, brass, steel and stainless steel.

# LEADED SOLDERS

HVAC/R  
PLUMBING

THE 40/60, 50/50, AND 60/40 TIN-LEAD COMPOSITION COMPRISE THE MAJORITY OF LEAD SOLDER USE. THESE TIN BASED SOLDERS ARE FREQUENTLY USED FOR GENERAL REPAIR, ELECTRICAL CONNECTIONS, RADIATORS, AND DRAIN/WASTE/VENT (DWV) PLUMBING TUBE. THE SOLDERS ARE AVAILABLE IN SOLID WIRE AND FLUX CORED FORMS. FLUX CORED SOLDERS ARE AVAILABLE IN BOTH ROSIN AND ACID CORE TYPES.

## 40/60

A general purpose solder with a 1000° F melting range. It is often used for body work “wiping” applications. It is also frequently used for sheet metal joints and auto radiator repair.

## 50/50

A popular tin/lead alloy with a 600° F melting range. Compared to 40/60, the narrower melting range improves flow, yet provides sufficient body to “cap” finished joints. 50/50 is used for general soldering work including non-potable water DWV, copper tube plumbing applications.

## 60/40

With an approximate 150° F melting range, 60/40 requires less heat to reach its melting temperature. This is often beneficial when soldering electrical or electronic components. This solder is also a popular choice for stain glass applications.

**CAUTION:** It is illegal to use lead-bearing solders in public and private potable water systems.

**NOTE:** Several states prohibit a plumbing supply business from selling lead bearing solders. Customers should check with the respective agency in the state in which the lead bearing solders are to be sold or distributed

# 40/60

## ELECTRICAL PRODUCTS

MODEL SHOWN:  
40A61

### DESCRIPTION

With some exceptions, the tin-lead solders can be used to solder copper and most copper alloys, lead, high nickel alloys, and steel. Tin-lead solders are not recommended in high stress or vibration joints in the cooling industry due to lack of sufficient elongation properties. Heat sources include soldering guns, irons, and torch applications. \*Lead bearing solders are not to be used in potable water

### TYPICAL APPLICATIONS:

A tin-lead alloy with a wide melting range. Used for automotive, radiator, general purpose soldering.

## HARRIS OFFERS A WIDE RANGE OF SOLDER FLUX FOR MULTIPLE APPLICATIONS.

### BRAZING / SOLDERING FLUX

#### **PASTE FLUX:**

Designed for use with lead-free solders. Works extremely well with Bridgit® lead-free solder in potable water systems and equally well with other solders

#### **WATER SOLUBLE FLUX:**

A water flushable paste that holds its shape and will not slump. Use with plumbing applications, copper and copper-alloy tubes, heating, air-conditioning, mechanical piping, and fire sprinklers.

#### **ALUMINUM FLUX:**

A liquid flux for use with aluminum soldering. Use with Al-Solder® 500. Joins aluminum to dissimilar metals.

#### **PASTE FLUX:**

An active soldering flux formulated for use with tin-lead, tin-antimony, and tin-silver solders.

#### **LIQUID FLUX:**

A general purpose zinc chloride flux for soldering with all soft solders use with tin-lead solder, tin-antimony solder, Stay-Brite® solder, for soldering virtually all metals, except aluminum, magnesium or titanium. Not recommended for use in electrical or electronic applications.

#### **BLACK FLUX:**

An all purpose, high temperature flux for use in silver brazing. Formulated for applications where the work is subjected to rapid, localized heating.

#### **WHITE FLUX:**

An all purpose, low temperature flux for use in silver brazing. Use with most ferrous and non ferrous metals, not recommended on aluminum, magnesium, and titanium.

#### **POWDER FLUX:**

Stay-Silv® white powder flux is similar to the white paste flux but in a dry powder mixture. It is typically applied by heating the braze rod end and dipping it into the flux.

# BRIDGIT

## FLUX

MODEL SHOWN:  
BRPF4

### DESCRIPTION

Designed for use with lead-free solders. Works extremely well with Bridgit® lead-free solder in potable water systems and equally well with other solders. Meets all requirements of the Safe Drinking Water Act. Stays active to 800 °F and will not burn at soldering temperature. This reduces black carbon formations that can result in voids and leaks.

### TYPICAL APPLICATIONS:

Bridgit paste flux stays active to 800 °F. At soldering temperature, including those required by most new lead-free solders, Bridgit flux will not burn, thus reducing carbon formations that may result in leaks. The flux is unexcelled for use in soldering copper, brass, bronze, galvanized and other plumbing fittings. This flux works extremely well with Bridgit lead-free solder in potable water systems. This flux, however, should work equally well with other solders. Bridgit paste flux meets all requirements of the Safe Drinking Water act.

PART NO.	SIZE	FLUX	ACTIVE RANGE		SPECIFICATIONS

# STAY-CLEAN

## FLUX

MODEL SHOWN:  
SCLF16

### DESCRIPTION

Stay Clean liquid flux is an inorganic acid & salt type flux. It is formulated to be active at temperatures optimum for a range of solder compositions and is ideal for soldering a variety of base metals as noted below.

### TYPICAL APPLICATIONS:

Designed primarily for copper to copper and copper to brass connections the paste form is ideal for soldering tube joints. Not recommended for electrical or electronic applications due to the potential corrosive residue of the flux. Stay Clean® Paste flux works well with most leaded and lead-free solder compositions. Flux residue should be removed after soldering

**STAY-SILV<sup>®</sup> WHITE**

**FLUX**

MODEL SHOWN:  
**SSWF1**

**DESCRIPTION**

An all purpose, low temperature flux for use in silver brazing. Use with most ferrous and non-ferrous base metals, not recommended on aluminum, magnesium, and titanium.

**TYPICAL APPLICATIONS:**

Use Stay-Silv<sup>®</sup> white flux when silver brazing cast iron, copper, brass, bronze, and steel brazing. For stainless steel Stay-Silv<sup>®</sup> Black Flux is recommended.

**STAY-SILV<sup>®</sup> BLACK**

**FLUX**

MODEL SHOWN:  
**SSBF1/2**

**DESCRIPTION**

An all purpose, high-temperature flux for use in silver brazing. Formulated for applications where the work is subjected to rapid, localized heating. Particularly useful in applications where large amounts of refractory oxides may form, such as with stainless steel alloys. Use with stainless steel, carbide, heavy parts, and prolonged heating cycles.

**TYPICAL APPLICATIONS:**

Use Stay-Silv<sup>®</sup> Black Flux on heavy parts, where localized overheating may occur, and where parts are heated over a prolonged period. Stay-Silv<sup>®</sup> Black Flux is also suggested when brazing stainless steel.

BLACK****FLUX****MODEL SHOWN:  
ESF1/2PB****DESCRIPTION**

Quality brazed joints require flux to protect the joint during heating and promote complete braze alloy flow. To ensure the best connections Harris designed, developed, and produced a variety of fluxes for specific applications to meet our customer's needs.

**TYPICAL APPLICATIONS:**

- Environmentally-friendly boric acid and borax free
- Smooth consistency for easy application
- Powder flux has excellent adherence when heated rod is dipped into flux
- Dissolves surface oxides and protects against oxidation during heating
- Wide activation range
- Excellent flux coverage during heating
- Easy flux residue removal

# OXY ACETYLENE VS. AIR ACETYLENE

HVAC/R PLUMBING

FOR THE HVAC/R TECHNICIAN, CHOOSING THE RIGHT PROCESS FOR YOUR BRAZING AND SOLDERING APPLICATIONS DEPENDS ON MANY FACTORS INCLUDING BUDGET, VERSATILITY, BASE MATERIALS, PARTS SIZE, AND USER SKILL SET. THE CHART BELOW WILL HELP YOU CHOOSE THE RIGHT TOOL FOR SOLDERING AND BRAZING PIPE.

	AIR ACETYLENE	OXY ACETYLENE
<b>GENERAL APPLICATIONS</b>	Suited for installation and repair in field Confined spaces, portability, and versatility Thinner base metals	Suited for general repairs & installation and soldering Fast / high-volume work Thicker base metals
<b>PERFORMANCE</b>	Lower temperature up to 2000°F to 3000°F Low flame intensity - heat transfer slow Broad heat zone Tips have a wide operating range Smaller size and weight - more convenient to use	Higher temperature up to 6000°F High flame intensity - heat transfer fast Confined heat zone Generally tips have a narrow operating range Larger size and weight - less convenient to use
<b>SAFETY</b>	Very stable Durable and less expensive to repair Gases can be transported with less restrictions	Less safe due to possibility of flashbacks More expensive to repair Rules and regulations pertaining to safe transport of gases more complex

## HARRIS AIR-FUEL HAND TORCHES FOR DEMANDING PROFESSIONALS

The line of Harris air-fuel hand torches brings high performance and convenience to professional heating, ventilation, air conditioning, plumbing and refrigeration contractors. Built with heating performance, temperature consistency and flame control in mind, a Harris hand torch is the perfect partner for demanding brazing and soldering applications.

## HOT TECHNOLOGY

Professional contractors need high-performance torches with truly hot flames engineered to deliver faster brazing and soldering times. Harris hand torches incorporate specially designed high-output swirl combustion tips that are tested for optimal brazing and soldering performance.

## DURABLE MATERIALS

Harris hand torches are constructed to stand up in the harshest situations. With industrial grade materials like 304 stainless steel and 360 brass, Harris hand torches mean business.

## VERSATILE PERFORMANCE

Harris hand torches have the heating performance and temperature consistency needed for many of today's common brazing and soldering situations.

# inferno®

BY HARRIS

## SWIRL COMBUSTION TECHNOLOGY

The revolutionary Inferno® tip has a specially designed insert that delivers reliable swirl combustion performance every time. The swirl combustion of the Inferno® tip is unlike anything offered on the market. Contractors get a consistent, hotter flame that will engulf and wrap around the work piece for maximum efficiency.

## THE HOTTEST TIP, EVERYTIME

The technology behind the Inferno® is the result of exhaustive research and development followed by exacting standards in manufacturing. The lack of heat, inconsistency and "Horns" you might find in the flames of other brands are not found in the flame of the Inferno® by The Harris Products Group. With Inferno®, you get a richer, hotter, more perfect burn.

## PROOF POSITIVE – THE PERFECT FLAME

Using thermal photography techniques, the product development team at The Harris Products Group evaluated the relative flame consistency and heat of the Inferno® tips. The team focused on developing a configuration in the design of the Inferno® tips that would produce the proper heat with reliable and repeatable flame performance.

## DURABLE, LONG-LIFE DESIGN

Tips take a beating, so the Inferno® is constructed from thick and strong 304 stainless steel tube stock. All Inferno® tips are crafted from industrial grade materials designed to stand up in the field. The Inferno® by The Harris Products Group is a tip that is built to last.

## QUALITY, PRECISION MANUFACTURING

Engineers at The Harris Products Group, in developing the Inferno®, understand that the heat contractors need starts with the precision of the tip orifice. To get the best flame, the team at The Harris Products Group developed a unique manufacturing process that allows for consistent production of all Inferno® tip orifices. Our exacting manufacturing standards ensure the optimal delivery of fuel gas, resulting in the perfect flame. In addition, during the manufacturing process, every tip is tested twice, once to ensure the perfect orifice and once to ensure flame quality – this all adds up to making a truly great, hot tip.

# MORE HEAT, CONTROL AND CONSISTENCY

Contractors in heating, ventilation, air conditioning, plumbing and refrigeration know that when it comes to quality and performance, the heat, temperature consistency and flame need to be perfect every time. The equipment they choose and the brand they rely on need to deliver. We created the Inferno<sup>®</sup> to meet the rigorous needs of today's contractor.

## YOUR GO-TO TIP

The Inferno<sup>®</sup> by Harris can deliver what projects in the field require – a hot, consistent and controllable flame with optimal safety for a job well done. Sure, professional contractors need to have air-fuel and oxy fuel equipment choices at their disposal. But why be burdened with a complicated oxy fuel setup when a high-performance air fuel Inferno<sup>®</sup> tip is really the best tool for the job? Contractors can rely on the Inferno<sup>®</sup> by Harris for the hot, consistent and controllable flame they need.

## EASY TO INTEGRATE

All Inferno<sup>®</sup> tips were designed to work and integrate with today's existing quick-connect air fuel handles. This allows contractors to simply and quickly connect the Inferno<sup>®</sup> tip to their existing torch handle and they are ready to work. And, the Inferno<sup>®</sup> by The Harris Products Group was designed to be compact and portable, meeting the real-world needs that contractors have.

## INFERNO<sup>®</sup> APPLICATIONS

COPPER

## PRO INFO

Manual oxy-fuel brazing is common in the air conditioning and refrigeration industry. Properly prepared base metals, uniform heat, proper selection of brazing alloys and fluxes, along with operator skill are critical factors in making sound brazed joints. Here are some typical pitfalls to avoid to ensure your brazing joints are sound:

**PITFALL NO. 1:** The outside of the joint is hot, but the inside is not hot enough. Remember to heat the tube first, which will conduct heat into the fitting to raise the inside temperature.

**PITFALL NO. 2:** The flux has broken down due to excessive heat. Flux can become saturated with oxides if it is overheated, preventing flow of the brazing alloy. A softer flame or a heavier coating of flux will help.

**PITFALL NO. 3:** The brazing alloy balls up instead of running into the joint. Either the base metals have not reached brazing temperature, and the alloy has been melted by the torch flame, or the joint has overheated, resulting in flux that no longer is active. Review the heating procedure. Another possibility is that the base metals are not properly cleaned.

**PITFALL NO. 4:** The brazing alloy flows away from, instead of into, the joint. The fitting may not have reached the proper brazing temperature. Direct the flame toward the fitting.

**PITFALL NO. 5:** The brazing alloy cracks after it solidifies. With copper connections especially, a likely cause is insufficient braze penetration into the joint. This may cause the brazing alloy to crack under stress or vibration. Be sure to hold to recommended clearance and review your brazing technique.

## OXYGEN ACETYLENE OUTFITS

MODEL SHOWN:  
15HV601-200A

### DESCRIPTION

The Harris HVAC Outfits contains all the quality equipment needed for brazing. The solid brass brazing handle and cutting attachment have industry standard connections which make them compatible with most brazing equipment. As supplied, the outfit is capable of cutting up to a 1" plate and welding up to a 1/16" plate. The outfit can cut up to a 4" plate and weld up to a 1/2" plate with larger tips and acetylene cylinder.

### DETAILS

**Capacity:** Cuts up to 1" thick, welds to 1/16"

**Duty:** Light

**Mixer Type:** Equal pressure

**Warranty:** 7 years - Regulator

1 year - All other components

**Related Items:** FlashGuard® Check Valves

## ACETYLENE WELDING AND BRAZING TIPS

MODEL SHOWN:  
5090

### DESCRIPTION

Model 5090 tips are manufactured using environmentally-friendly tellurium copper that has excellent machining properties resulting in a higher quality tip. They are swaged for more precise and consistent flames. They use a universal mixer for sizes 1-5, eliminating the expense of using a different mixer for every tip size. All 5090 tips have a metal-to-metal mixer seat virtually eliminating the possibility of leaks and the need for thread sealants when used with Harris mixers.

### DETAILS

## CUTTING ATTACHMENT – FOR USE WITH ALL FUEL GASES

MODEL SHOWN:  
36-2HV

### DESCRIPTION

The Model 36-2HV is a \*Victor® compatible cutting attachment with brazed triangular stainless steel tubes, making it light in weight while still providing exceptional strength and rigidity. The cutting attachment has an industry standard connections which make them compatible with most brazing equipment. The captive union nut protects the seats and "O" rings from damage. It features a fold forward cutting lever allowing easier connection, even with gloves on. The ease-on cutting valve provides smoother controlled starts. The forged solid brass head provides years of safe, dependable service, even under the most abusive conditions.

### DETAILS

**Capacity:** Cuts to 3"/76.2mm acetylene; 1"/25.4mm alternate fuels

**Duty:** Light

**Length:** 7½"/190.5mm

**Weight:** 0.75 lbs./0.34 kg.

## HEAVY PREHEAT TWO-PIECE HAND CUTTING TIP

MODEL SHOWN:  
3690AC

### DESCRIPTION

Acetylene cutting tips specifically used with Harris Model 36 cutting attachments. Two piece design provides a heavy preheat and is easy to clean.

### DETAILS

**Construction:** Two-piece

**Preheat Type:** Heavy

**Where Used:** HVAC, maintenance, metal art, etc.

**Compatible Equipment:**  
E-9 Tip cleaner P/N: 9000160

WARRANTY

## CUTTING ATTACHMENT – FOR USE WITH ALL FUEL GASES

MODEL SHOWN:  
36-2

### DESCRIPTION

The Model 36-2 is a classic design Harris cutting attachment with brazed triangular stainless steel tubes, making it light in weight while still providing exceptional strength and rigidity. The captive union nut protects the seats and "O" rings from damage. It features a fold forward cutting lever allowing easier connection, even with gloves on. The ease-on cutting valve provides smoother controlled starts. The forged solid brass head provides years of safe, dependable service, even under the most abusive conditions.

### DETAILS

**Capacity:** Cuts to 3"/76.2mm acetylene; 1"/25.4mm alternate fuels

**Duty:** Light

**Length:** 7½"/190.5mm

**Weight:** 0.75 lbs./0.34 kg.

**Mixer Type:** Equal pressure

**Where Used:** HVAC, maintenance, metal art, etc.

### TIP STYLES

\*Propylene or propane-based fuels and natural gas.

HARRIS CUTTING ATTACHMENTS HAVE THE BEST FEATURES IN THE INDUSTRY. ALL HARRIS CUTTING ATTACHMENTS HAVE THE SAME GREAT FEATURES FOR SAFETY, RELIABILITY AND LONG LIFE. SUITABLE FOR INDUSTRIAL USE.

### OVERVIEW

All Harris Cutting Attachments share these great features:

- Brazed triangular tube construction for safety and durability
- Solid forged brass heads for performance and long service life
- Flip-up oxygen cutting lever for convenience and ease of operation
- Captive union nut protects connections from damage
- Ease-on cutting valve for safety and cutting control

### TYPICAL APPLICATIONS

- Metal fabrication
- HVAC/R installation
- Plumbing applications

# PRO INFO

## DIFFERENTIATING BETWEEN BRAZING AND SOLDERING

ONE OF THE MAIN DIFFERENCES BETWEEN BRAZING AND SOLDERING IS WORKING TEMPERATURE. SOLDERING TAKES PLACE BELOW 840° F AND USES TIN AS THE PRIMARY ALLOYING ELEMENT. BRAZE ALLOYS ARE COPPER-BASED AND TEND TO MELT AT HIGHER TEMPERATURES – ABOVE 1190° F FOR COPPER JOINING. BOTH SOLDERING AND BRAZING PROVIDE SEALS VIA CAPILLARY ACTIONS, WHERE THE MELTED FILLER FLOWS INTO THE SPACE BETWEEN TUBE AND FITTING, KNOWN AS THE CAPILLARY SPACE, AND ADHERES TO THE TUBE AND FITTING SURFACES. BRAZING DELIVERS GREATER FATIGUE RESISTANCE AND DEVELOPED JOINT STRENGTH THAN SOLDERING.

# GAS REGULATION

FOR OVER 100 YEARS HARRIS HAS DESIGNED AND MANUFACTURED PRECISION-BUILT INDUSTRIAL REGULATORS WITH DURABLE, TIME TESTED MATERIALS. OUR INDUSTRIAL REGULATORS PUT IT ALL TOGETHER - PROVEN SAFETY FEATURES, QUALITY MANUFACTURING PROCESSES, CONSISTENCY IN PERFORMANCE AND THE BEST OVERALL VALUE.

## HISTORY

Tradesmen today demand rugged, industrial-grade tools that can stand up to harsh work environments and are engineered to last. The time-proven technology of the Model 25 regulator has made it the workhorse of the Harris regulator offering. Fabricators everywhere depend on it to deliver consistent performance and reliability.

Harris is proud to introduce its newest regulator platform—Generation Next—the Model 25GX.

We've taken everything you've come to trust about the Model 25 performance and made it even better. Whether it's our silky smooth adjusting knob, our large easy-to-read gauges or our new 7-year warranty, we are delivering the next generation of regulation equipment now.

We've been designing the best equipment money can buy for over 100 years—and we are just getting started.

## HARRIS REGULATORS ARE MANUFACTURED TO MEET OR EXCEED ALL RELEVANT INDUSTRY STANDARDS AND GUIDELINES.

### ENCAPSULATED SEAT

- 1 Most regulators eventually fail due to seat contamination. Harris regulators include a 10 micron filter to keep particulate materials from contaminating the valve seat.
- 2 Regulators feature large scale gauges for easy readability (Model 25GX )
- 3 Harris regulators are designed with fewer internal components which translates to fewer failures.
- 4 Only the highest-quality industrial grade materials, such as brass, stainless steel, nickel and chrome are used in the construction of Harris regulators. We avoid the use of lower-cost plastic composites and other materials that will not hold up to every day industrial use.

MODEL

## ECONOMICAL GENERAL PURPOSE

MODEL SHOWN:  
601-15-200A

### DESCRIPTION

This single-stage regulator is designed to be compact and economical, but with features typically available in more expensive regulators. It is used where weight, cost and size are factors.

### DETAILS

**Capacity:** Light duty

**C<sub>v</sub>:** 0.08

**Gauges:** 50mm ABS plastic

**Pressure Regulation:**  
0.4 PSIG/100 PSIG

**Seat:** One-piece encapsulated seat design with internal filter and PTFE Teflon® seat

**Certifications:** UL® listed/CGA E-4

**Featured In:** Expert® series kits, air fuel equipment kits, Port-A-Torch®

**Weight:** 1.39 lbs. /0.63 kg.

MODEL

## HVAC PURGING

MODEL SHOWN:  
25GX-500-580

### DESCRIPTION

This single-stage nitrogen purging regulator is designed for performance and economy, it is with features typically available in more expensive regulators. Specifically designed for HVAC and other nitrogen pressure testing and blanketing applications. Both the 25GX-250 and 25GX-500 feature a "T" bar for easier adjusting at high pressures.

### DETAILS

**Capacity:** Medium to heavy duty

**Gauges:** 2.5" Steel dual scale

**Pressure Regulation:**  
0.2 PSIG/100 PSIG

**Seat:** One-piece encapsulated seat design with internal filter and PTFE Teflon® seat

**Where Used:** HVAC purging, pressure testing

**Weight:** 3.2 lbs./1.45 kg.

**Related Equipment:**  
Flowmeter P/N:5400855

## HVAC PURGING REGULATOR

MODEL SHOWN:  
601-400-580

### DESCRIPTION

The model 601 is designed for applications where weight and size are critical factors. Used for HVAC purging, pressure testing with nitrogen or other inert gases. Gauges feature rubber gauge guards for added protection in abusive conditions. Plastic knob for easy grip and precise adjustment. Maximum delivery pressure 400 or 800 PSIG.

### DETAILS

**Capacity:** Light/Medium Duty

**Gauges:** 50mm ABS plastic-psi/bar

**Pressure Regulation:**

0.4 PSIG/100 PSIG

**Seat:** One-piece encapsulated seat design with internal filter and PTFE Teflon® Seat

**Body:** Brass

**Outlet:** 1/4" 45° Flare SAE

**Certifications:** CGA E-4

**Where Used:** HVAC purging, pressure testing

**Weight:** 1.39 lbs./ 0.63 kg.

# PRO INFO

## NITROGEN PURGE & BRAZING

**MOST HVAC INSTALLATION INSTRUCTIONS REQUIRE FLOWING NITROGEN THROUGH THE COPPER TUBE DURING BRAZING. THIS IS AN IMPORTANT STEP IN PRODUCING A QUALITY HVAC SYSTEM.**

Oxygen in the air combines with copper to form surface copper oxide. We see this on copper tube as a light to dark brown discoloration. You've probably seen ACR/medical gas copper tube supplied from the tube mill nitrogen charged and capped. This is designed to prevent this oxide formation inside the tube. Once the caps are removed and the tube is cut for installation, the nitrogen protection is lost.

At high brazing temperature a heavier black oxide forms (cupric oxide). On cooling this oxide flakes off to form "scale". While mostly cosmetic on the tube exterior, inside the tube the oxide flakes are carried by the refrigerant through the system. This contaminant can restrict flow through small orifices such as metering devices or the pilot valve capillary tube in a reversing valve. This problem has long been an issue in brazing HVAC tube. It has become more important with the change from HCFC refrigerants like R-22 that use mineral oil to the new HFC refrigerants (410a) using POE oils. Due to their polar nature, POE oils have a solvent effect and can "scrub" the copper tube walls. Oxide from tube walls and loose scale can circulate through the system.

To prevent oxidation, flow dry nitrogen through the tube during brazing. Nitrogen is inert, (non- reactive), and will displace the oxygen to prevent scale formation. Nitrogen is typically introduced into the system through the Schrader valve (after removing the core), or other system opening. Connect a hose or tube from the nitrogen cylinder to one end of the pipe. The cylinder will be equipped with a regulator or flow control valve such as a Harris Model 801 HVAC purging regulator.

There is no universal requirement for the delivery pressure setting, but the goal is to use low volume/pressure to displace the oxygen. A suggested starting point is 2 -3 CFH or 1.5 - 2 PSI. Some users will set pressure until they feel a slight flow at the exit point on the back of their hand. It's good practice to initiate flow before heating and continue to flow nitrogen until the part has cooled.

Avoid an excessive flow rate that builds pressure inside the tube. A high flow rate will tend to cool the tube reducing brazing heat efficiency. Excess nitrogen pressure can build up inside the tube and reduce braze alloy penetration. A small hole in a cap at the end of the line will allow the nitrogen to escape.

**It's a good idea to experiment with flow rates by test brazing parts on the bench. Section the finished assemblies and inspect for a clean inner tube wall.**

# BRAZING AND SOLDERING TRAINING

North American Technician Excellence (NATE,) headquartered in Arlington, VA., was founded in 1997 and is the nation's largest non-profit certification organization for heating, ventilation, air conditioning and refrigeration technicians. NATE is the only technician certification organization governed, owned, operated, developed and supported by the HVACR industry.

## OUTLINE FOR HVACR NATE RECOGNIZED PROGRAM

### CREDITS EARNED

The course CEH indicates the approximate number of hours the course should last period.

### 2 CONTINUING EDUCATION HOURS (CEH)

Field training course with lecture/discussion/demonstration  
NATE course number 5272-0004

### 3 CONTINUING EDUCATION HOURS (CEH)

Field training course with lecture/discussion/demonstration  
NATE course number 5272-0002

### 4 CONTINUING EDUCATION HOURS (CEH)

Field training course with lecture/discussion/demonstration and hands on participant brazing  
NATE course number 5272-0003

### 12 CONTINUING EDUCATION HOURS (CEH)

The Harris Products Group two day "Brazing Workshop" is given at Mason, Ohio headquarters.  
Lecture/discussion/demonstrations/hands on participant brazing  
NATE course number 5272-001

### REQUIRED TOPICS IN ALL SESSIONS:

- Brazing and Soldering Basics – capillary action, wetting
- Brazing and Soldering Preparation – cutting, cleaning, reaming, (copper tube)
- Brazing and Soldering Equipment – oxy/acetylene & air-fuel, operation and safety
- Importance of purging with nitrogen during brazing
- Brazing filler metals – phosphorus copper alloys – properties and applications, (copper and copper to brass)
- Brazing filler metals – high silver alloys – properties and applications, (copper, steel, brass, bronze, stainless steel)
- Solder filler metals – properties and applications
- Aluminum solder and brazing products
- Fluxes for soldering and brazing – types, purpose, application, and post-braze/solder cleaning
- Base metals – properties and filler metal selection
- Heating technique and filler metal application

All attendees must sign a NATE Official Recognized Provider Attendance Record.

Harris will provide a certificate of completion to each person.

This course applies to the following NATE course outlines:

### INSTALLER

ACIN Air Conditioning – Air to Air  
HPIN Heating – Reverse Cycle Air to Air  
HGIN Heating Hydronics – Gas  
RLIN Light Commercial Refrigeration  
RCIN Commercial Refrigeration

### SERVICE

ACSV Air Conditioning – Air to Air  
HPSV Heating – Reverse Cycle Air to Air  
RLSV Light Commercial Refrigeration  
RCSV Commercial Refrigeration

## MERCHANDISING POINT OF PURCHASE

### DISPLAY SETS

- ▶ "STRIKE ZONE" APPROACH TO MERCHANDISING
- ▶ INCREASED MERCHANDISING POWER
- ▶ MULTIPLE PLAN-O-GRAMS TO FIT ANY STORE SIZE
- ▶ EVERYTHING A CUSTOMER NEEDS FOR CUTTING, WELDING, BRAZING AND SOLDERING
- ▶ HEADER CARDS FOR EASY PRODUCT SELECTION

### PACKAGING

#### EQUIPMENT AND ALLOYS

- ▶ HIGH GRAPHIC PACKAGING
- ▶ TRILINGUAL (ENGLISH, SPANISH, FRENCH)
