Jergens®
MANUFACTURING EFFICIENCY

Operating Principle

Jergens/OK-VISE low-profile clamps function on the principle that when tightened down they expand, simultaneously pressing the workpieces against the solid stops and preventing any possibility of play. These clamps are designed to fit between the workpieces and take very little space on the fixture plate. Small in size, yet possessing an excellent clamping force up to 150 kN, these clamps exert a holding force which exceeds the load imposed by machining forces.

Our low-profile clamps can be used on single machines just as successfully as in large Flexible Manufacturing Systems. No additional investment other than fixed stops are required.

Standard models come with a hardness of 48-52 HRC and serrated jaws. Smooth jaws are also available on request. Both the wedge and the jaws are made of tool steel and are thru hardened. The clamping operation involves one bolt (M5-M16) ensuring quick set up times.

Jergens/OK-VISE low-profile clamps come in two basic models, one with a single-wedge construction and the other with a double-wedge construction that creates a pull-down action. We also offer a line of machinable jaw models for workpieces of irregular shape and a special models for castings and wire EDM applications.

Serrated Jaw Clamp

General-purpose clamps for your shop. Serration creates high friction, which ensures reliable clamping in any circumstances.

Serrated Jaws

Part Number	A			B	C	D	E	Socket Head Screw DIN 912	Clamping Force of Jaws kN (lbs)	Tightening Torque Nm (ft/lbs)	Weight in g (lbs) approx.	Hardness of Jaws HRC

*DK2-VTI measures given in inches and pounds.

Smooth Jaw Clamp

When no marks on the workpieces are allowed, smooth jaws are used.

Smooth Jaws

Part Number	A			B	C	D	E	Socket Head Screw DIN 912	Clamping Force of Jaws kN (lbs)	Tightening Torque Nm (ft/lbs)	Weight in g (lbs) approx.	Hardness of Jaws HRC
	Min	Optimum	Max

Self-Adjustable Jaw Clamp

These clamps have a self-adjustable ball gripper screw inserted into a clamp jaw. The ball bearing at the end is made of steel and equipped with torsion protection, allowing the ball to self-adjust up to 9 degrees. This makes clamping irregular-shaped parts and castings more flexible

Part Number	A			G			B	C	D	E	Dia. of Serration (D1)	Socket Head Screw DIN 912	Clamping Force of Jaws kN (lbs)	Tightening Torque Nm (ft/lbs)	Weight in g (lbs) approx.	Hardness of Jaws HRC X	Hardness of Jaws HRC Y

Economy Clamp

BK-VT-O

BK2-VT-SO

AK2-VT-SO

The cost efficient choice!

These models meet the demands of workholding when ultra precision and high clamping force are not necessary. They are made of the same raw material as our other models, and the bottom of the jaws are ground for precise positioning on the fixture base. AK2-VT-SO always comes with Viton o-rings.

Only the bottom of the jaw is ground. Only our two smallest series clamps are available in the economy model (AK2-VT-SO).

Part Number	A			B	C	D	E	Socket Head Screw DIN 912	Clamping Force of Jaws kN (lbs)	Tightening Torque Nm (ft/lbs)	Weight in g (*lbs) approx.	Hardness of Jaws HRC

Clampforces

Horizontal forces of Jergens/OK-Vise low profile clamps

MULTI-RAIL RM SYSTEM

***Jergens* / OK-VISE®**
WORKHOLDING CLAMPS AND ACCESSORIES

Multi-Rail RM System

Multi-Rail is the new generic-purpose workholding system of Jergens/OK-VICE. Compared to a traditional machine vise, the Multi-Rail system offers the following benefits:

- Using the components of the system, even the most challenging workpiece types can be machined
- All sides of a workpiece can be machined with two setups
- Multiple workpieces can be clamped on the same area
- Workpiece will be safely fixtured
- It is also possible to clamp very large work pieces

Multi-Rail RM System Components

SRM-132GD1

To make selection of the components easier, the Jergens/OK-Vise team has selected some basic sets to enable an easy start with the Multi-Rail system. In the pictures below you can see some solutions done with each set.

- For three-directional machining
- One or two workpieces can be machined at the same time

Code	Name	Pcs
RM-300	Multi-Rail Base	1
RMS-S	Stop Module Smooth	2
RMC-DS	Clamp Module D Smooth	1

SRM-132GD1

- For three-directional machining
- Four workpieces can be machined at the same time

Code	Name	Pcs
RM-300	Multi-Rail Base	1
RMS-S	Stop Module Smooth	3
RMC-BS	Clamp Module B Smooth	2

SRM-236GB1

- Two SRM-133GB1 sets
- Also suitable for holding long workpieces

Code	Name	Pcs
RM-300	Multi-Rail Base	2
RMS-S	Stop Module Smooth	6
RMC-BS	Clamp Module B Smooth	4

SRM-4C4GD1

- To hold large workpieces

Basic Modules

**Single-Wedge Clamp****Clamps with Serrated Jaws****Clamps with Smooth Jaws****Pull-Down Models**

- Double Wedge
- Single Wedge

**Clamps with Machinable Jaws****Additional Piece Models****Clamps with Self-Adjustable Jaws**

Jergens/OK-Vise low-profile clamps are the core components of our Multi-Rail system. Our low-profile clamps are available with various jaw types. In the Multi-Rail RM system, clamps of sizes D and B can be used.

Multi-Rail RM sets are built using few basic modules:

- Clamp modules
- Stop modules
- Side guides
- Parallels and riser blocks

MULTI-RAIL RH SYSTEM

Jergens® / OK-VISE® WORKHOLDING CLAMPS AND ACCESSORIES

Multi-Rail RH System

Multi-Rail RH is the new generic-purpose fixturing system from Jergens/OK-VISE. Multi-Rail RH is optimal when the clamping force is over 4 tons and also when the work pieces are rather big.

Fixture Sets

To make selection of the components easier, the Jergens/OK-VISE team has created some basic sets to enable an easy start with the Multi-Rail system. Compared to a traditional machine vise, the Multi-Rail RH system offers the following benefits:

- Using the components of the system, even the most challenging workpiece types can be machined.
- All sides of a workpiece can be machined with two setups.
- Multiple workpieces can be clamped on the same area.
- The workpiece is safely fixtured under all circumstances.
- It is also possible to clamp very large work pieces.

Jergens

WORKHOLDING SOLUTIONS GROUP

COMBO-RAIL

***Jergens* / OK-VISE®**

WORKHOLDING CLAMPS AND ACCESSORIES

Combo-Rail

Jergens/OK-VISE Combo-Rail is a unique patent-pending design from us. There are several operating modes available: Floating Mode, Centralizing Mode and Machine Vice Mode.

Floating Mode

This is the most fascinating operating mode of the Combo-Rail. Here the fixture adjusts to the place of the workpiece. This is often needed while clamping inaccurate workpieces like castings, forgings or flame cut work pieces. Therefore floating mode installation normally needs positioning with some other means, like two Multi-Rail units, positioning pins, positioning by a robot etc.

Centralizing Mode

The jaws move synchronously. The center line of a casting or similar workpiece remains in the same place even if the outer dimensions of the workpiece changes. Centralizing mode

Machine Vice Mode

In this mode the other jaw is fixed to the base. Compared to traditional Vises, in this method the ergonomics are radically improved in vertical machining centres

Universal Mode

CRH-K250 is a Combo-Rail unit that can be set in all three modes as mentioned before, operating modes by changing the jaw or wedge components (all included). All workpieces from 0 to 120 mm size can be clamped. The base height is 50 mm and total length is 250 mm.

Combo-Rail Applications

Please notice that the Combo-Rail units can be combined with most of OK-VISE Fixturing Concept components. Especially combining Combo-Rail units with Jergens/OK-VISE Multi-Rail has been proven to be a versatile combination.

Floating Mode

Centralizing Mode

Machine Vise Mode

There are several adapter sets available for various platforms.

GRID FIXTURING SYSTEM

***Jergens* / OK-VISE®**
WORKHOLDING CLAMPS AND ACCESSORIES

Grid Fixturing System

Grid Fixturing System is the new generic-purpose fixturing system from Jergens/OK-VISE. It can be adapted to the grid platforms of leading workholding suppliers. With the Grid Fixturing System very complex forms of workpieces can be also clamped. On a grid platform you can also combine Jergens/OK-VISE modules with the components of other suppliers.

Grid Fixturing System Components

Clamp Module

GCD-DR1	Serrated Jaws, D-Series
GCD-DS1	Smooth Jaws, D-Series
GCD-BR1	Serrated Jaws, B-Series
GCD-BS1	Smooth Jaws, B-Series
GCS-DS1	Adjustable, Smooth D-Series Jaw
GCS-DR1	Adjustable, Serrated D-Series Jaw

Stop Module

GS-SF1	Round Smooth
GS-SF2	Rectangular, Fixed, Smooth
GS-SA1	Adjustable, Smooth
GR-RF1	Round, Serrated
GR-RF2	Rectangular, Fixed, Serrated
GR-RA1	Adjustable, Serrated

BLANK FIXTURING SYSTEM

***Jergens*® / OK-VISE®**
WORKHOLDING CLAMPS AND ACCESSORIES

Blank Fixturing System

The Jergens/OK-VICE Blank Fixturing System is designed for cases when dedicated (product-specific) fixtures are needed. This is typical in high-volume production. Blank plates are used as a platform on which to build the fixture. Aluminium and steel blanks are recommended.

In addition to OK-VICE low-profile clamps and bolts, a variety of components are now available. Various clamp modules, stopper modules, side guides and parallels (or riser blocks) are the basic modules of the system. High-friction jaws in stopper modules and clamps ensure reliable clamping when high machining forces are used.

When sensitive contact with the workpiece is a must, then smooth, diamond-surface or contour-machined jaws are optimal. Now designing dedicated fixtures is easier than ever.

Blank Fixturing System – Low-Profile Clamps

Jergens/OK-Vise low-profile clamps are the core components of our Blank system. Our low-profile clamps are available with various jaw types.

Single-Wedge Clamp

Pull-Down Models

- Double Wedge
- Single Wedge

Clamps with Machinable Jaws

Clamps with Serrated Jaws

Clamps with Smooth Jaws

Additional Piece Models

Clamps with Self-Adjustable Jaws

Clamp Module

KCD-DR1	Dual Directional Long, Serrated, D
KCD-DS1	Dual Directional Long, Smooth, D
KCD-DS2	Dual Directional, Smooth, D
KCD-DR2	Dual Directional, Serrated, D
KCS-DR1	Single Directional, Serrated, D
KCS-DS1	Single Directional, Smooth, D

Stop Module

KS-S1	Smooth
KS-S2	Smooth
KS-S01	Round, Smooth
KS-R1	Serrated
KS-R2	Serrated
KS-R3	Serrated
KS-S2	Smooth
KS-D1	Diamond
KS-D2	Diamond
KS-D3	Diamond

Parallels

KP-1	Wide Pin

LOW-PROFILE CLAMPS

COMPONENTS FOR DEDICATED FIXTURING

Blank Fixturing System

A Core Component of any Modern Workholding System

Jergens/OK-VISE low-profile clamps adapt optimally to any system. They fit into grid pattern systems, T-slot tables, serrated rails, and many other platforms. Additionally, the most economical fixtures can be built by using low-profile clamps on machinable plates. Jergens/OK-VISE clamps are suitable for three-directional machining, 5-axis machining, and many other modern machining methods.

Absolute Stability

The key feature of the Jergens/OK-VISE low-profile clamp is its cross-wedge structure in both the horizontal and vertical planes, which means that the clamp is locked firmly in every direction as it is tightened down. This eliminates all possibilities of measurement error due to sliding.

Extreme Clamping Force

With extreme clamping force up to 150 kN, Jergens/OK-VISE low-profile clamps guarantee a holding capacity that clearly exceeds the load imposed by machining forces.

Small in Size – Giant in Performance

Low-profile clamps do not require as much space as traditional machine vises. This leads to efficient use of the machinable area, savings in tool changes, less operator interventions, and ultimately to extended cycle times while reducing machine downtime.

Thanks to their small size, these light-weight clamps are easy to install. Moving them from one application or machine to another is virtually effortless. Their universal design makes easy use a reality in manual as well as CNC machines. With Jergens/OK-VISE low-profile clamps, it is possible to achieve the highest level of effectiveness.
