

**Environmental, fleet and maintenance professionals tell us:
“Traditional white pads are ineffective on persistent leaks and drips in wet weather.”**

Stains where oil has washed away from spill pads.

Look familiar? Water ‘beads up’ on white pads. This prevents oil from reaching the fibers, causing excess oil to wash away.

Other options finally exist. They’re called Spiltration® Husky Polyback Products.

Spiltration® Husky Polyback Products work rain or shine.

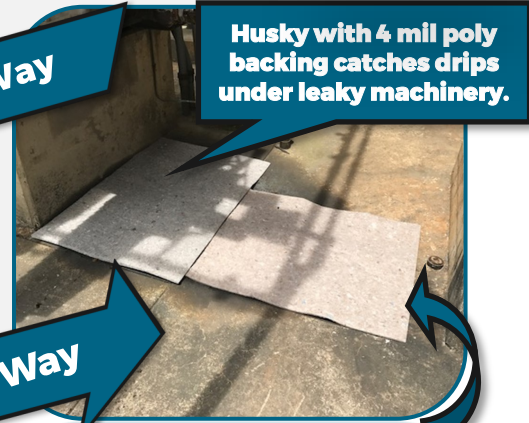

- ✓ **Work well in wet conditions.**
- ✓ **Absorb oil-based leaks and spills.**
- ✓ **Allow clean water to filter through.**
- ✓ **Plastic film backing on Husky Polyback options prevents oil from reaching the ground.**
- ✓ **UV Stable. Built to work in bright sunlight for months and months.**
- ✓ **Husky Material is made from 100% post-consumer waste to support your sustainability initiatives.**

Old Way

Ineffective traditional materials allow leaking oil to reach the sump grate.

Husky with 4 mil poly backing catches drips under leaky machinery.

Our Way

Husky without polyback filters oil from rainwater over the sump grate.

“Thankfully, Spiltration products have practically eliminated the spread of transformer fluid leaks by capturing and absorbing the oil, while allowing clean rainwater to filter through. In fact, they are the only products we have found that work in wet weather.”

– Senior Maintenance & Environmental Coordinator - Electric Utility
