

SGS[®]
Solid Carbide Tools

High Performance | **VALUE AT THE SPINDLE**

ISO 9001 Certified Company

New Expanded Offering

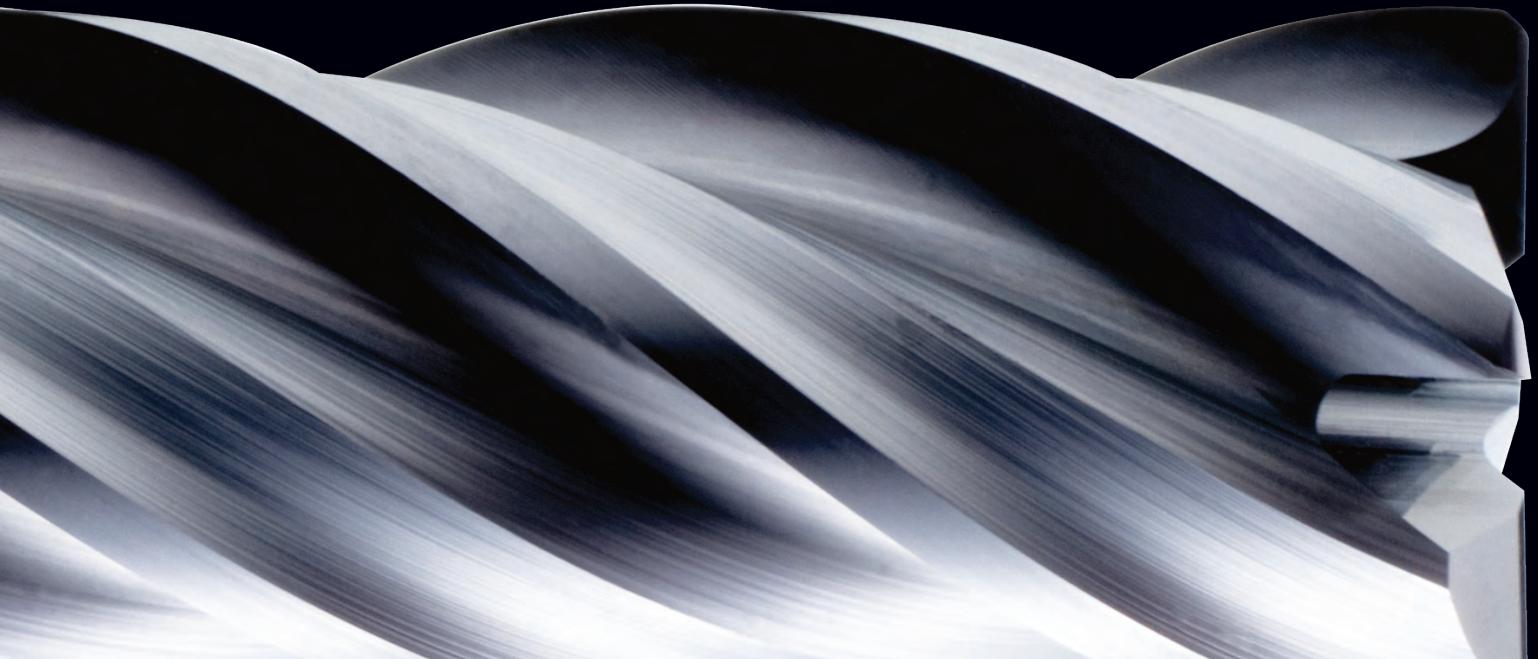

www.sgstool.com

ADVANCED PATENTED DESIGN DELIVERS ADVANCED PRODUCTIVITY

With conventional end mills, the cutting teeth entering and exiting the material creates a natural rhythm that results in damaging harmonics. Harmonics produce a frequency that resonates through the entire tool, resulting in one of the most damaging forms of cutter wear known as chatter. Chatter degrades the quality of your finish. It also creates tool pressure which has a negative effect on tool life. If you use conventional long reach tools, your chatter problem is further compounded by deflection, which limits your maximum speeds and cutting depths. Until now, your only choice was to adjust your operating parameters to account for the limitations of your conventional end mill.

WITH ITS PATENTED, ONE-OF-A-KIND GEOMETRY, THE Z-CARB-AP OFFERS THREE STAGES OF CHATTER SUPPRESSION, RESULTING IN THE QUIETEST, MOST STABLE MILLING EXPERIENCE AVAILABLE.

ENHANCED CORNER GEOMETRY WITH TIGHT TOLERANCE CORNER RADIUS

- Improved accuracy
- Improved shearing capabilities
- Reduces tool pressure

UNEQUAL HELIX DESIGN

- Eliminates harmful harmonics unequal flute spacing
- Suppresses chatter

PATENTED VARIABLE RAKE ANGLE

- Controls cutting zone temperature
- Produces ideal chip shape and size

- New Expanded tools
- Now also available with HAIMER SAFE-LOCK option on select diameters

THREE STAGES OF CHATTER SUPPRESSION

1

Unequal flute spacing helps to disrupt the rhythmic pattern created by the cutting edge of typical end mills, which helps to suppress the development of damaging harmonics.

2

The patented unequal helix design aids in eliminating the damaging harmonics that occur during typical machining by changing the angle at which each cutting edge enters and exits the material during the milling process.

3

The rake angle is the main factor that determines the size and shape of the chip, as well as the pressure and temperature of the cutting zone. By incorporating the SGS Patented Variable Rake Geometry, the Z-Carb-AP can alter and control the cutting dynamic like no other tool available, which takes chatter suppression to a whole new level of advanced productivity.

LONG REACH DESIGNS

- Cut deeper and faster in long reach applications

AlTiN Ti-NAMITE-X Ti-NAMITE-X Advantages over AlTiN

Hardness (HV)	2549 HV	3600 HV	Increased hardness offers better resistance to abrasion wear and improved coating strength.
---------------	---------	---------	---

Young's Modulus of Elasticity	460 GPa	368 Gpa	Increased toughness in the coating improves the performance in applications that encounter a high level of mechanical stress such as milling.
-------------------------------	---------	---------	---

Adhesion	70 N	130 N	Good adhesion is critical to optimum performance; the level of measured adhesion has been proven to have a direct relationship to overall tool life. With a denser more uniform coating structure Ti-NAMITE-X improves the ability for the coating to perform at higher temperatures due to an increased oxidation stability.
----------	------	-------	---

TEST DATA PROVES:

- Ti-NAMITE-X reduces edge wear by up to:
 - » 58% in Inconel
 - » 64% in Tool Steel
 - » 66% in Alloy Steel
- Z-Carb-AP reduces chatter by up to 68% compared to conventional end mills
- Z-Carb-AP experiences up to 70% less tool wear compared to conventional end mills
- Z-Carb-AP produces up to 321% smoother surface finish than conventional end mills

**They've exceeded so well...
I'm getting insane results here.**

THEY HAVEN'T FAILED ME.

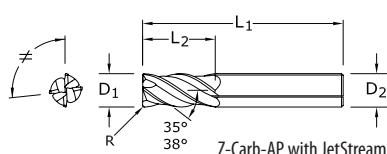

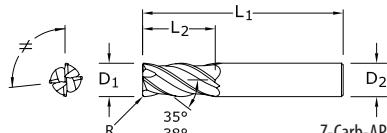

Quotes and figures
from end users using
Z-Carb AP tools in
their shops and
*getting real results,
with real savings.*

**The Z-Carb AP tool saved
an end user almost 74%,
taking a cost per part
from \$1,073 to \$281!**

I know you needed results for the quarter, but I can't give you exact data until this thing dies.

That is why I recommend you all around town.

***It isn't getting any better...
with straight endmilling.***

Solutions Around The Globe

SGSTool Company is a privately-held, ISO-certified leader of round solid carbide cutting tool technology for the aerospace, metalworking, and automotive industries with manufacturing sites in the United States and United Kingdom. Our global network of Sales Representatives, Industrial Distributors, and Agents blanket the world selling into more than 60 countries.

Leaders in Solid Carbide Tool Technology

Brand names such as Z-Carb, S-Carb, V-Carb, Hi-PerCarb, Multi-Carb have become synonymous with high performance tooling in the machining and metalworking industry.

We're proud to have pioneered some of the world's most advanced cutting technology right here on our Northeast Ohio manufacturing campus. SGS high performance end mills, drills and routers are increasing productivity and reducing cost around the world.

Exceeding Customer Expectations

In addition to our substantial R&D facilities, we offer a portfolio of products and services that have an unparalleled track record in manufacture, supply and value at the spindle.

- Incredible batch-to-batch consistency
- Metallurgical lab dedicated to testing and rigorous quality control
- ISO-certified quality procedures
- Patented geometries that extend tool life, reduce chatter, cut cycle times, and improve part quality—even at extreme parameters
- Specialists in extreme and demanding product applications
- Specialty Group tooling services
- Experienced Field Sales Engineers who work to optimize a tool for any application
- Dedicated multi-lingual customer service representatives

SGS Products are distributed by:
