INSULATION GUIDE

Which Insulation is right for you?

FLEECE

Perhaps the most common, is a lightweight option that is warmer than cotton/foam linings and still less bulky than some insulations.

1404, 1412, 1425, 1438

COTTON FOAM

Lightweight, economical option. Provides warmth and it will absorb moisture.

1578

COLD BLOCK™ Tillman's own insulation creation. It consists of a poly/cotton blend that keeps hands.

1568, 1571, 1573

POLAR FLEECE

Soft napped insulating fabric made from polyester with moderate warmth.

1581, 1584, 1586

ACRYLIC SHELL

Light weight synthetic with minimal warmth that absorbs moisture.

1772, 1773

PILE

Thicker heavyweight synthetic wool material.

1450

THINSULATE

Breathable and moisture-resistant insulator. The fibers of Thinsulate™ are more effective at trapping air and keeping hands warm while allowing moisture to escape. The colder the temperature, the higher gram insulation the user will want. However, the higher the gram, the less flexibility they will have.

- 40 gram for cool conditions or high activity levels
- 100 gram for colder conditions or lighter activity levels

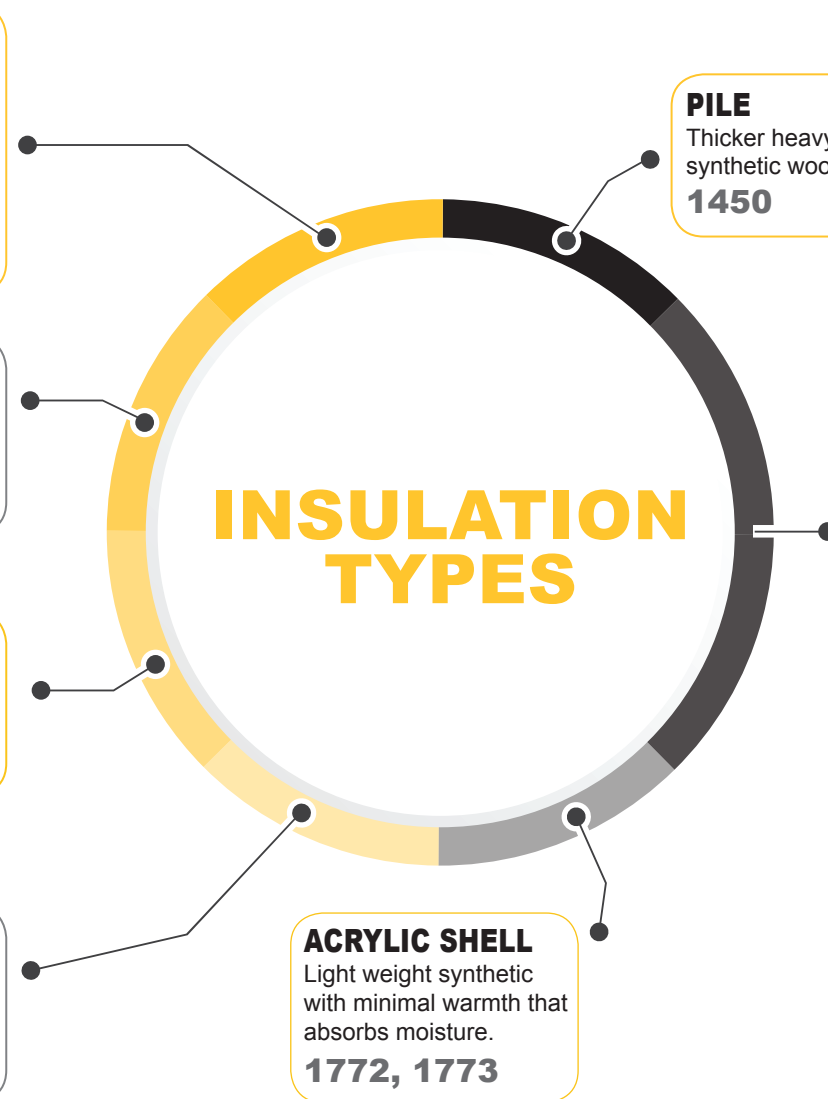

100 GRAM
