TODAY'S ANTI-FOG

Most anti-fog coatings will perform well at first, but their effectiveness will diminish over time.

Regardless of industry, application or environment, foggy lenses are the number one challenge that users of safety eyewear face on the job. Foggy lenses expose workers to serious injury and significantly decrease productivity.

Lenses fog for a number of reasons, all of which are related to temperature and humidity. When sudden changes in temperature occur, small pockets of moisture condense on the lens, causing hazy-white fog to form, often immediately. The most common causes of fogging include:

- Transitioning between warm and cool environments
- Physical activity and exertion
- Handling materials with fluctuating temperatures
- Environmental and weather conditions

ANTI-FOG RE-ENGINEERED

Uvex HydroShield Anti-Fog Coating

Dual - action HydroShield provides up to **60X longer-lasting*** fog-free performance — even after extended wear and repeated cleanings — and provides **2X greater scratch-resistance*** than competitive anti-fog coated products.

- Permanently bonded to the lens
- No application
- No maintenance

See Uvex HydroShield
Anti-Fog Coating in Action!

*Anti-fog performance based on independent lab test results when compared to median test results of competitive anti-fog coated products under EN166 and EN168 testing standards. Comparative lens life test performed using a Bayer Abrasion Test method and may vary between environment and application.
