Diameter Difference: $D/d \leq 1.4$

Step Drill Available as Special

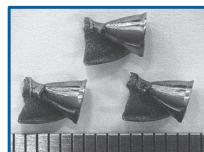

3-Flutes vs 2-Flutes

3 Key Concepts that Differentiate Mega Muscle® from 2-Flute Drills

High Feed Rate

Conventional 3-fluted drills are most commonly used in the processing of materials with short cutting chips, such as cast irons and cast aluminums. Because 3-fluted drills have a smaller flute size (chip room) than 2-fluted drills, they are rarely used in difficult-to-machine materials like steels.

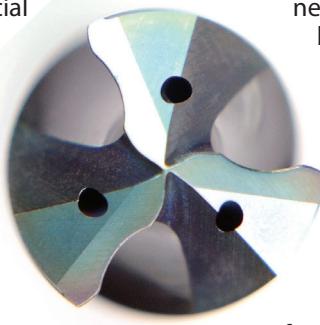

However, OSG's Mega Muscle® drills have a specially shaped flute (PAT.P.) that breaks steel chips into small, manageable pieces for easy evacuation. This allows for increased feed rates up to 1.5 to 2 times faster than 2-fluted drills. More importantly, rotational speed can be decreased, thus decreasing the amount of wear on the the Mega Muscle® drills also have a special tendency of chipping of the corners on

drill to prolong tool life. Last but not least, negative cutting edge to decrease the breakout of through holes.

High Precision

The 120° equal spacing margins of the 3-flute design allows for more stable, vibration-free hole processing, thereby increasing hole quality and tolerance. This stability is consistent throughout the 3-flute drill's tool life; whereas a 2-flute drill often has drastic changes of hole size and quality. With this 3-flute design, the Mega Muscle® drills are capable of achieving hole accuracy twice as precise as a 2-flute drill.

Reduced Work Hardening

The amount of work hardening and depth of work hardening have a tendency to be proportional to the feed per revolution. When compared to conventional 2-flute drills with the same feed per revolution, the 3-flute design has proven to decrease work hardening. Therefore, if work hardening can be minimized for tap and reamer pilot holes, tool life of the secondary tool can be prolonged.

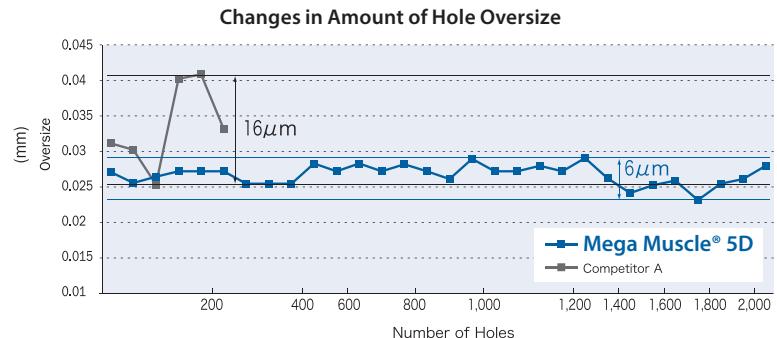

Amazing Speeds with Excellent Hole Accuracy

Hole Oversize Comparison in 4140 (30HRC)

Comparison between the amount of hole expansion vs. tool life. When compared to 2-fluted drills, the Mega Muscle® drill always shows a lower amount of hole expansion. The 2-fluted drills were found to have a hole expansion range of approximately 16 µm, while the Mega Muscle® drill only had a 6µm variation. The high hole accuracy is possible because the 3-fluted drill has 3 stable points of contact with a hole, when compared to a 2-fluted drill, which only has 2 points of contact.

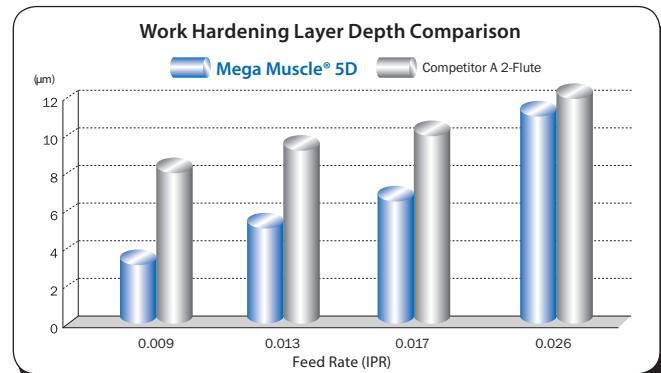

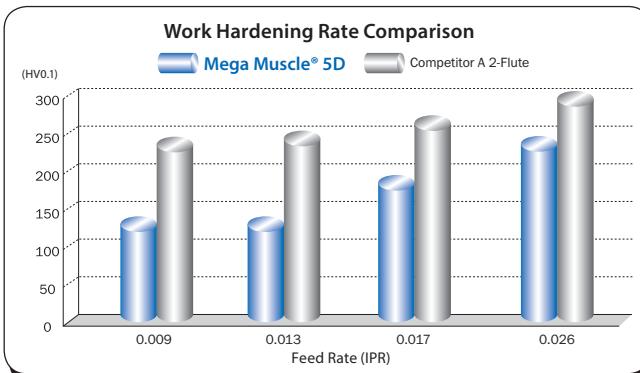

Tool	Mega Muscle® 5D Ø10.8mm
Work Material	4140 (30HRC)
Drilling Speed	230 SFM (2,060 RPM)
Feed	39.8 IPM (0.019 IPR)
Depth of Hole	1.96" (Through)
Coolant	Water Soluble
Machine	Horizontal Machining Center

Reduced Work Hardening

Comparison of the Amount of Work Hardening vs Feed Per Revolution in Carbon Steel

The below graphs show the level and depth of work hardening in carbon steel when comparing the Mega Muscle® drill versus 2-fluted drills. The amount of feed per revolution ranges from 0.009 to 0.026 IPR. Regardless of the number of flutes, work hardening has the tendency to increase as the feed rate increases. It can be noted, when the same feed rate is applied to both drills, the 3-fluted type has a much lower work hardening effect. Three-fluted drills always achieve lower work hardening rates when compared to 2-flute drills. Thus, it is best practice to keep the work hardening as low as possible when secondary operations such as tapping or reaming are required. The Mega Muscle® drill is able to offer this process stability to help reduce the burden for taps and reamers to prolong their tool life.

Tool	Mega Muscle® 5D Ø10.8mm
Work Material	1050
Drilling Speed	328 SFM (2,950 RPM)
Feed	Variable
Depth of Hole	1" (Through)
Coolant	Water Soluble
Machine	Horizontal Machining Center

Feed Rate	Mega Muscle® 5D		Competitor A (2-Flute)	
	Work Hardening Level	Work Hardening Depth	Work Hardening Level	Work Hardening Depth
	(HV0.1)	(µm)	(HV0.1)	(µm)
f=0.009 IPR	120	3	220	8
f=0.013 IPR	120	5	240	9
f=0.019 IPR	185	6.5	265	10
f=0.026 IPR	220	11	295	12

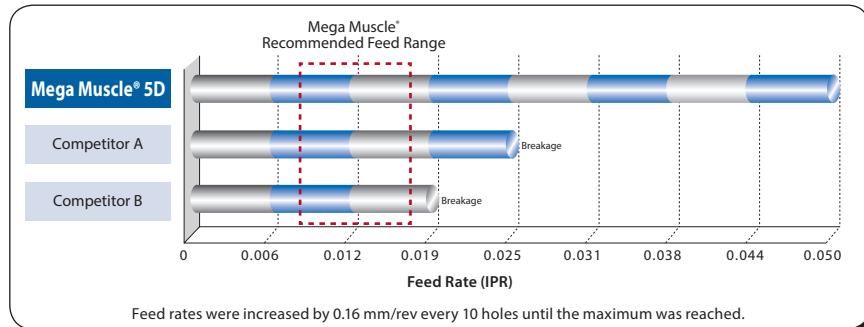

Amazingly High Feed Rates - 200 IPM!

2.0 to 2.6 Times More Productive than Competitor Drills

When processing ductile cast iron, the Mega Muscle® drill achieved a feed rate up to 200 IPM. This was achieved by combining the new point and flute design with superior rigidity. This rate is 2.0 to 2.6 times more productive than our competitors' drills. In this case, the actual recommended feed rate is approximately 0.014 IPR, which is the maximum limitation of our competitors' drills. However, as illustrated in the test, the Mega Muscle® drill has a large range of achievable feed rates. The priorities in any cutting condition should always be safety and application stability.

Tool	Mega Muscle® 5D Ø8mm
Work Material	Ductile Cast Iron
Drilling Speed	328 SFM (4,000 RPM)
Feed	Variable
Depth of Hole	1.57" (Through)
Coolant	Water Soluble (External)
Machine	Horizontal Machining Center

Note: Because the competitors' drills were not coolant-through. Coolant had to be fed externally during the test.

Efficiency Comparison During Maximum Feed

Tool	Drilling Speed (SFM)	Feed Rate (IPR)	Feed (IPM)
Mega Muscle® 5D	328	0.050	200
Competitor A	328	0.025	100
Competitor B	328	0.019	75

Competitor A	294	0.009	2.3	25.0	100

Cut Equipment Requirements in HALF

Machining 6150 Alloy Steel

The Mega Muscle® is capable of **reducing machine costs by 50%** by saving one machine investment.

Tool	Mega Muscle® 3D Ø5mm
Work Material	6150 Alloy Steel
Depth of Hole	0.79" (Through)
Coolant	Water Soluble
Machine	Vertical Machining Center

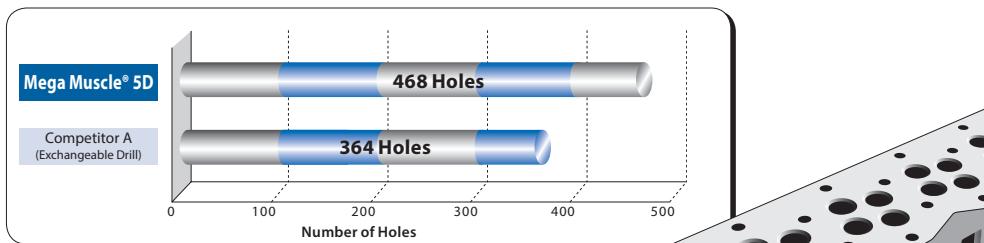

Higher Efficiency than Exchangeable Drills

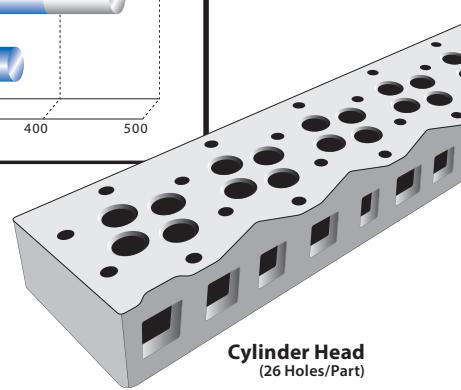

Head Cylinder, Head Bolt Hole in Gray Cast Iron

With the higher efficiency, the Mega Muscle® is capable of **an estimated cost savings of \$26,400!**

Tool	Mega Muscle® 5D Ø18mm
Work Material	Gray Cast Iron
Depth of Hole	4.72" (Through)
Coolant	Water Soluble
Machine	Horizontal Machining Center

	Depth of Hole (inch)	Mega Muscle® Drill			Competitor Head Exchangeable Drill

shaping your dreams

Safe use of cutting tools

- Use safety cover, safety glasses and safety shoes during operation.
- Do not touch cutting edges with bare hands.
- Do not touch cutting chips with bare hands. Chips will be hot after cutting.
- Stop cutting when the tool becomes dull.
- Stop cutting operation immediately if you hear any abnormal cutting sounds.
- Do not modify tools.
- Please use appropriate tools for the operation. Check dimensions to ensure proper selection.
